## Warning!

---

This equipment generates uses and can radiate radio frequency energy and if not installed and used in accordance with the instructions manual, it may cause interference to radio communications. It has been tested and found to comply with the limits for a Class A computing device pursuant to FCC Rules, which are designed to provide reasonable protection against such interference when operated in a commercial environment. Operation of this equipment in a residential area is likely to cause interference in which case the user at his own expense will be required to take whatever measures may be required to correct the interference.

Electric Shock Hazard – Do not operate the machine with its back cover removed. There are dangerous high voltages inside.

### Caution

**Risk of explosion if the battery is replaced with an incorrect type.**

**Batteries should be recycled where possible. Disposal of used batteries must be in accordance with local environmental regulations.**

### Disclaimer

**This information in this document is subject to change without notice. In no event shall Apex Technology Inc. be liable for damages of any kind, whether incidental or consequential, arising from either the use or misuse of information in this document or in any related materials.**

## Safety Precautions

Follow the messages below to prevent your systems from damage:

- ◆ Avoid your system from static electricity on all occasions.
- ◆ Prevent electric shock. Don't touch any components of this card when the card is power-on. Always disconnect power when the system is not in use.
- ◆ Disconnect power when you change any hardware devices. For instance, when you connect a jumper or install any cards, a surge of power may damage the electronic components or the whole system.

## 1.1 Features

- Intel 12<sup>th</sup> / 13<sup>th</sup> Gen. i3-1215U, i5-1235U, i7-1255U, i3-1315UE, i5-1335UE (Alder lake-U)
- 10.1” to 23.8” Industrial Compact Size Panel PC
- ARCHMI-Series IP66 Compliant Aluminum Front Bezel
- Support 1 x DDR5 4800MHz SO-DIMM, Up to 48G
- Power Input: DC 9-36V
- Support Resistive touch screen (Model: R) and Projected Capacitive Multi-touch screen (Model: P) by SKU
- Support High Brightness LCD Version for Optional
- Support Auto-Dimming, Optional
- Fanless Design

**\*Notice 1:**

We recommend purchasing the SSD + Heatsink from APLEX.

If you purchase an SSD locally, please remember to install a heatsink kit to prevent overheating, which may cause system instability.

\* To record power consumed when system has full loading with external devices attached.

\* Power consumption may have 10% tolerance difference due to different MB, parts, test instrument, and so on.

\* We suggest using the adapter that APLEX approved. If you would like to adopt your own power supply or adapter, please add another 20-30% from the above power consumption to make sure the system can work stable.

## 1.7 Brief Description of ARCHMI-S-9XXB Series

APLEX's ARCHMI-S-9XXD series products are a newly launched product line, ranging in size from 10.1" to 23.8". They feature a fanless, high-performance, and compact design, making them ideal for use as HMIs and control panels in smart production lines and self-service kiosks. With a protective aluminum enclosure, a full-plane resistive touchscreen or projected capacitive multi-touchscreen technology, and a wide-range power input from 9 to 36Vdc, the ARCHMI-S-9XXD series panel PCs can also be integrated with a variety of optional peripherals and accessories to meet specific application requirements.

## 1.8 Installation of Memory and Storage

Step 1 : Remove screws from the bottom side of back chassis.

Step 2 : Push down back chassis from the system

Step 3: Install memory module on the motherboard.  
Install M.2 M-Key 2280 for storage device (PCIe Type signal) on motherboard.

Step 4 : Push the back cover latch into the back cover sliding rail.

Step 5 : Tighten the screws.

## 1.9 VESA Mounting

The ARCHMI-S-9XXD series support VESA 100 mount.

VESA 100, 4-M4 screw x 4 PCs

## 1.10 Panel Mounting

There are mounting holes located along the four sides of the HMI. Position the ARCHMI-S panel pc against the panel mount and insert the mounting kit from the four sides and tighten them with screws.

Description	Qty	Unit
Panel mounting kit for 10.1" , 12.1" and 12.1"W	8	PCS

## 1.11 SSD heatsink kit installation guide

M.2 2280 HEAT SINK Dimension: 76 x 24 x 6.3mm

M.2 Module: The SSD module we test is Transcends TSXXXGMTE672A Series

Notice:

It is recommended to install an SSD heatsink to prevent the M.2 SSD from overheating during high-speed operations, which could lead to reduced performance or instability.

Step 1 :

Disassemble the SSD heatsink kit, then apply the thermal pad to both the top and bottom sides of the SSD. Secure the SSD to the thermal kit and tighten the screws.

### Mounting M.2 SSD

Step 2 :

Install the SSD with the thermal kit into the M.2 2280 slot on the motherboard.

SBC-7134 is a 3.5" industrial motherboard developed on the basis of Intel Alder Lake, which provides abundant peripheral interfaces to meet the needs of different customers.

### 2. DDR5:

(SO-DIMM 260Pin slot) DDR4 memory socket, the socket is located at the top of the board and supports 260Pin 1.2V DDR5 SO-DIMM memory module up to 48GB.

Max Memory Size (dependent on memory type).

### 3. VBAT1:

(1.25mm Pitch 1x2 wafer Pin Header) 3.0V Li battery is embedded to provide power for CMOS.

Pin#	Signal Name
Pin1	VCC_RTC
Pin2	GND

### 4. CLR\_CMOS1:

CMOS clear switch, CMOS clear operation will permanently reset old BIOS settings to factory defaults.

#### Procedures of CMOS clear:

- Turn off the system and unplug the power cord from the power outlet.
- To clear the CMOS settings, close CLR\_CMOS1 for 1 second
- Power on the system again.
- When entering the POST screen, press the <DEL> key to enter CMOS Setup Utility to load optimal defaults.
- After the above operations, save changes and exit BIOS Setup.

### 5. CPU\_FAN1:

(1.25mm Pitch 1x2 wafer Pin Header) Fan connector, cooling fans can be connected directly for use.

Pin#	Signal Name
1	GND
2	VCC(5V_S0)

Note:

Output power of cooling fan must be limited under 3W.

### 6. DC\_IN1:

(5.08mm Pitch 1x2 Pin Connector) DC9~36V System power input connector.

Pin#	Power Input

5	NC
6	SIM_DAT

**22. M2\_B1:**

(M.2 B-Key Socket) Support 3042/3052 4G/5G module with Nano SIM slot, and Support 2242 Nvme/NGFF interface SSD.

**23. M2\_M1:**

(M.2 M-Key Socket) Provide PCIe4, support M-key 2280 Nvme interface SSD.

**24. M2\_E1:**

(M.2 E-Key Socket) Provide USB2.0/PCIe1, support E-key 2230 Wi-Fi/BT expansion cards.

**25. SATA1:**

(SATA 7Pin) SATA connector provide SATA III signal for storages.

**26. SATA\_PWR1:**

(2.0mm Pitch 1x2 Wafer Pin Header) 5V power supply for SATA1 port device.

Pin#	Signal Name
1	5V_S0
2	GND

**Note:**

**Output current of the connector must not be above 1A.**

**27. AUTO\_BTN:**

The AUTO\_STN button allows you to select automatic power on after the motherboard is powered on.

### 3.9 Secure Boot Keys

How to Enroll Secure Boot Keys (PK, KEK, db) in BIOS/UEFI.

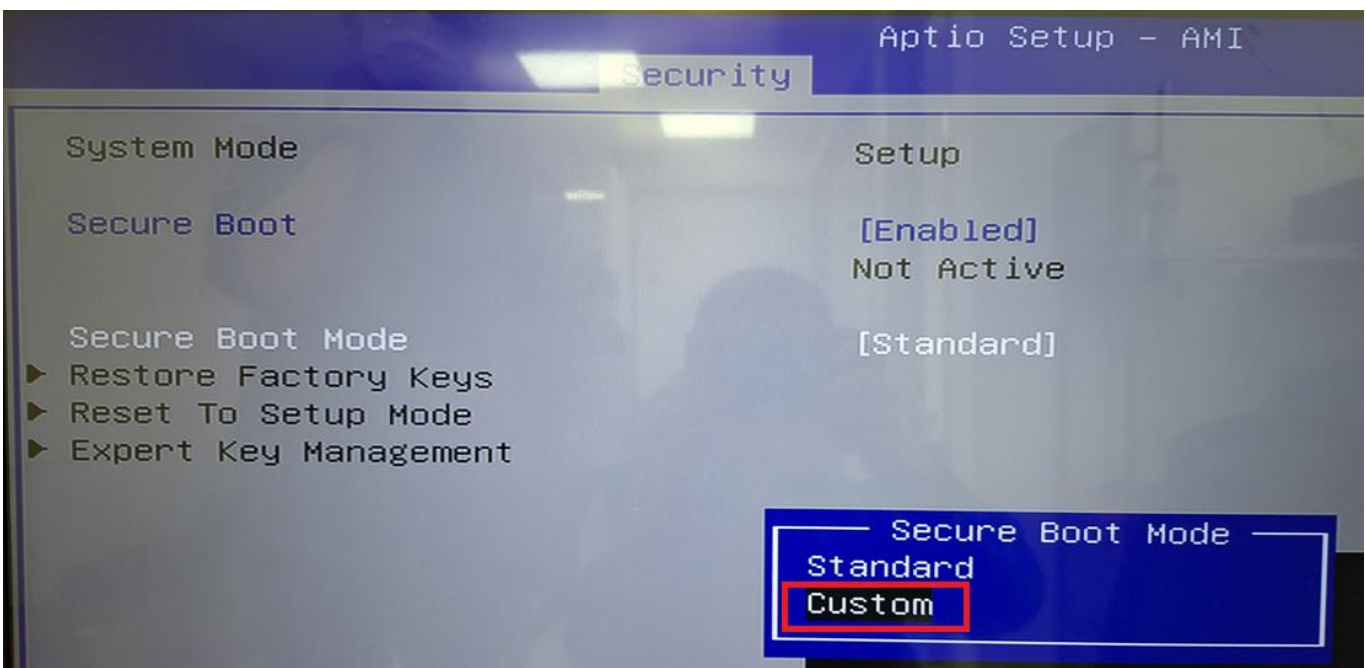

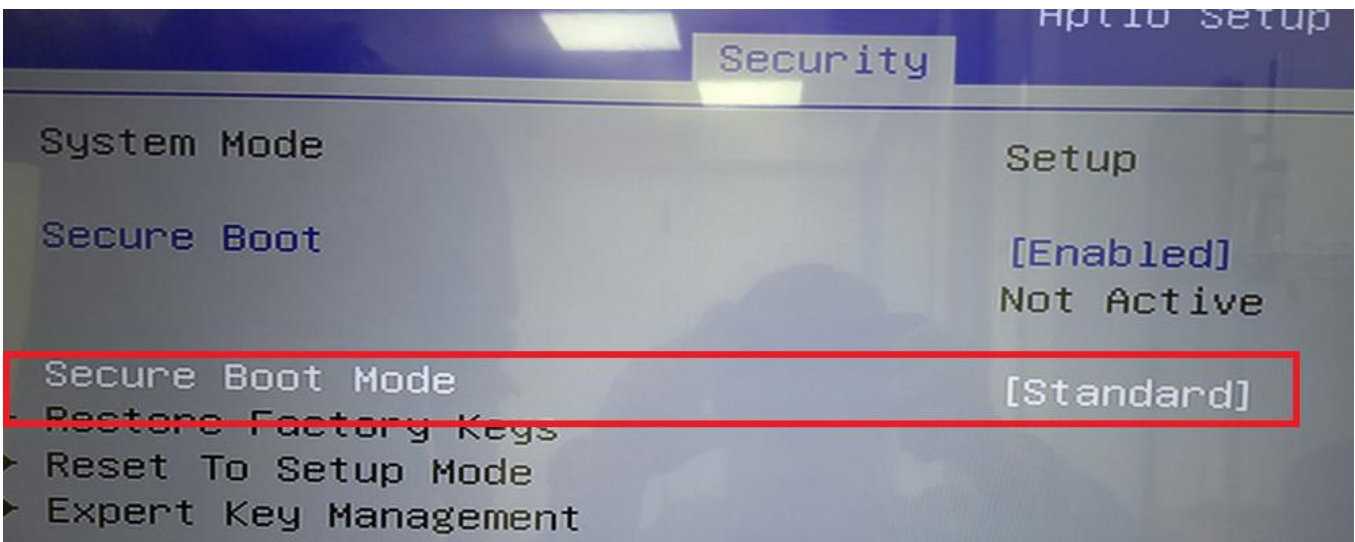

This document explains how to import Secure Boot keys into a UEFI firmware (BIOS). Procedures may vary slightly depending on the motherboard vendor, but the overall process is the same across most platforms supporting UEFI Secure Boot.

0. You must first obtain the Secure Keys (PK, KEK, db) from Microsoft.

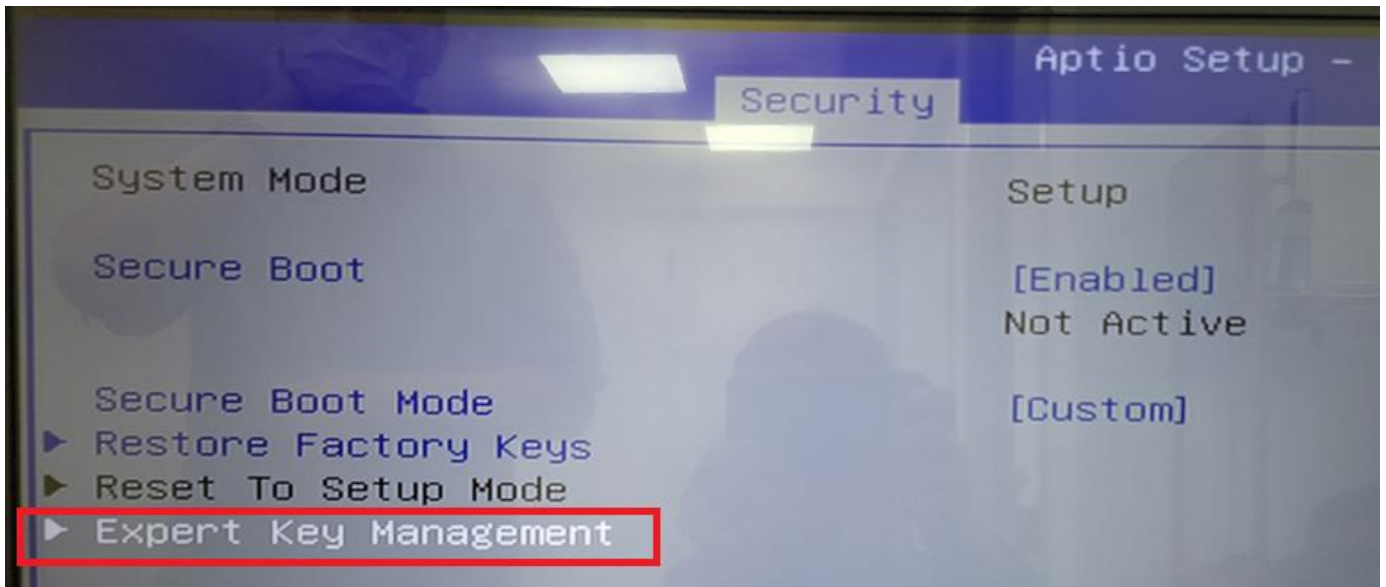

After that, prepare a FAT32-formatted USB drive, UEFI firmware typically only reads key files from FAT32 file systems. Copy your secure keys (PK, KEK, db) to the root directory of the USB drive.

1. When boot up the unit, press DEL on the keyboard. Enter the BIOS menu and select the option shown in the image below.

Path: Security/Secure Boot Mode, and select "Custom"

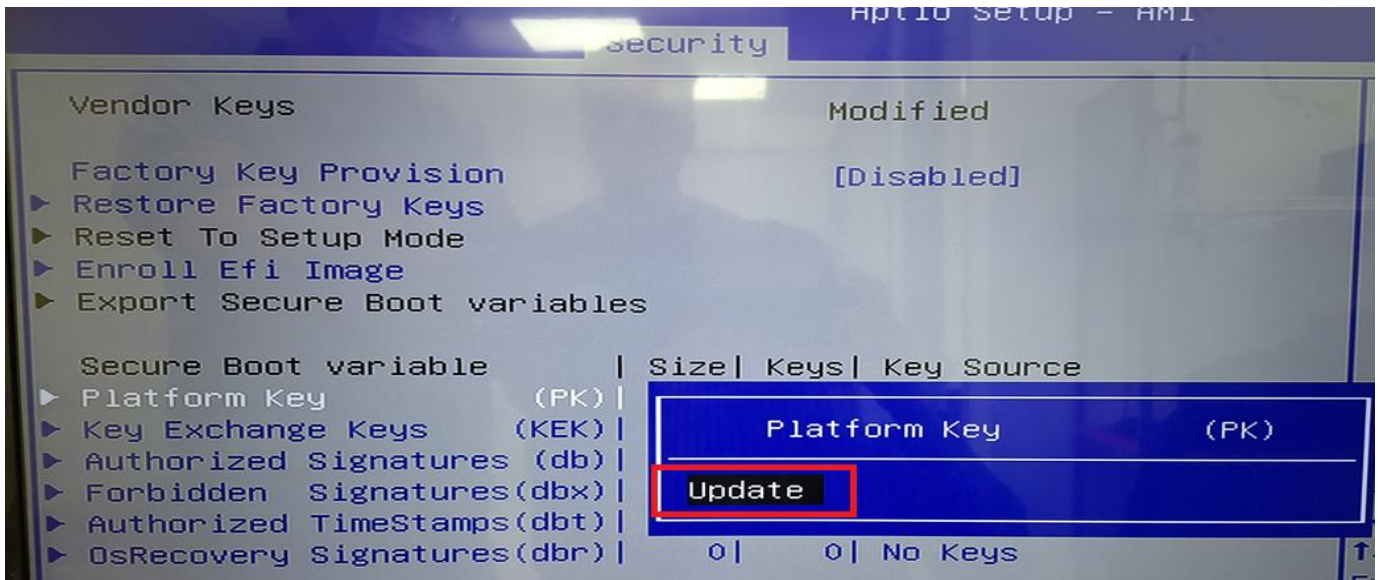

2. Then select “Expert Key Management”

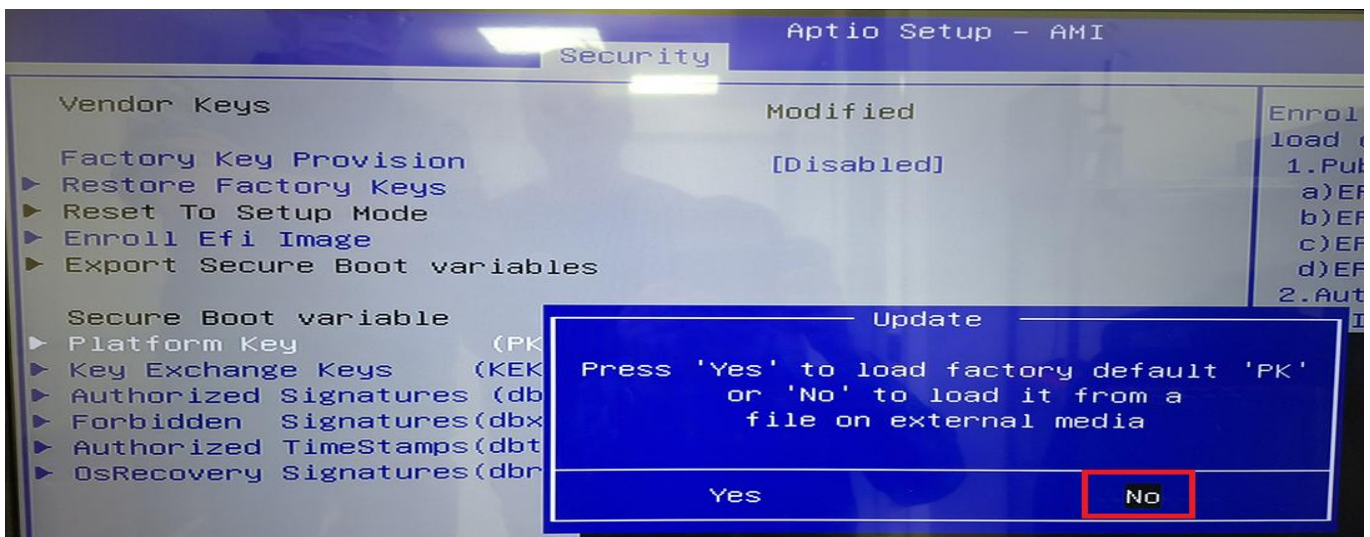

3. Select “Platform Key (PK)”, enter

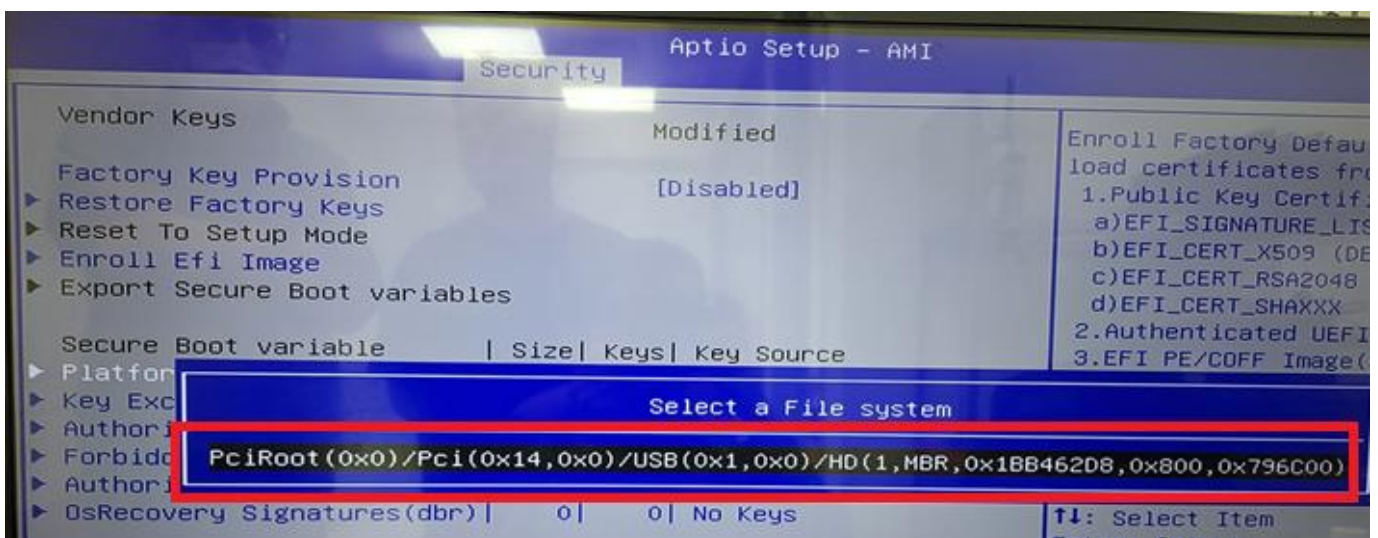

Select “Update”

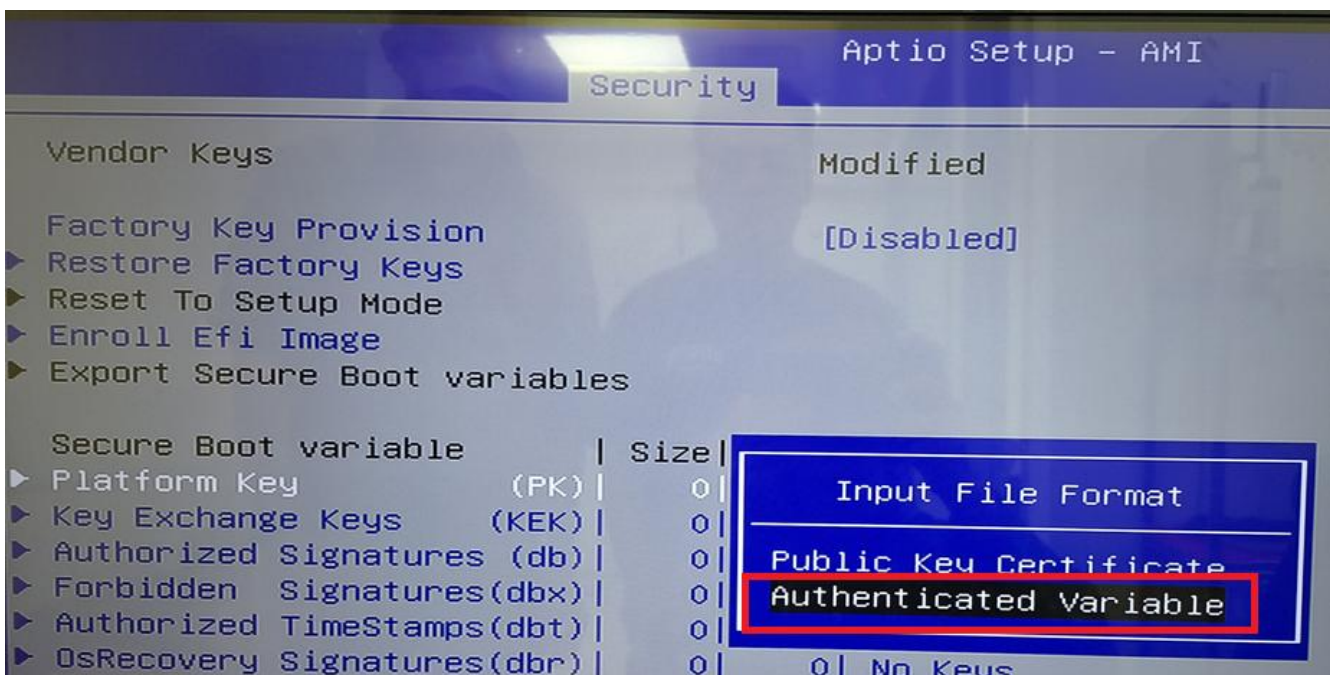

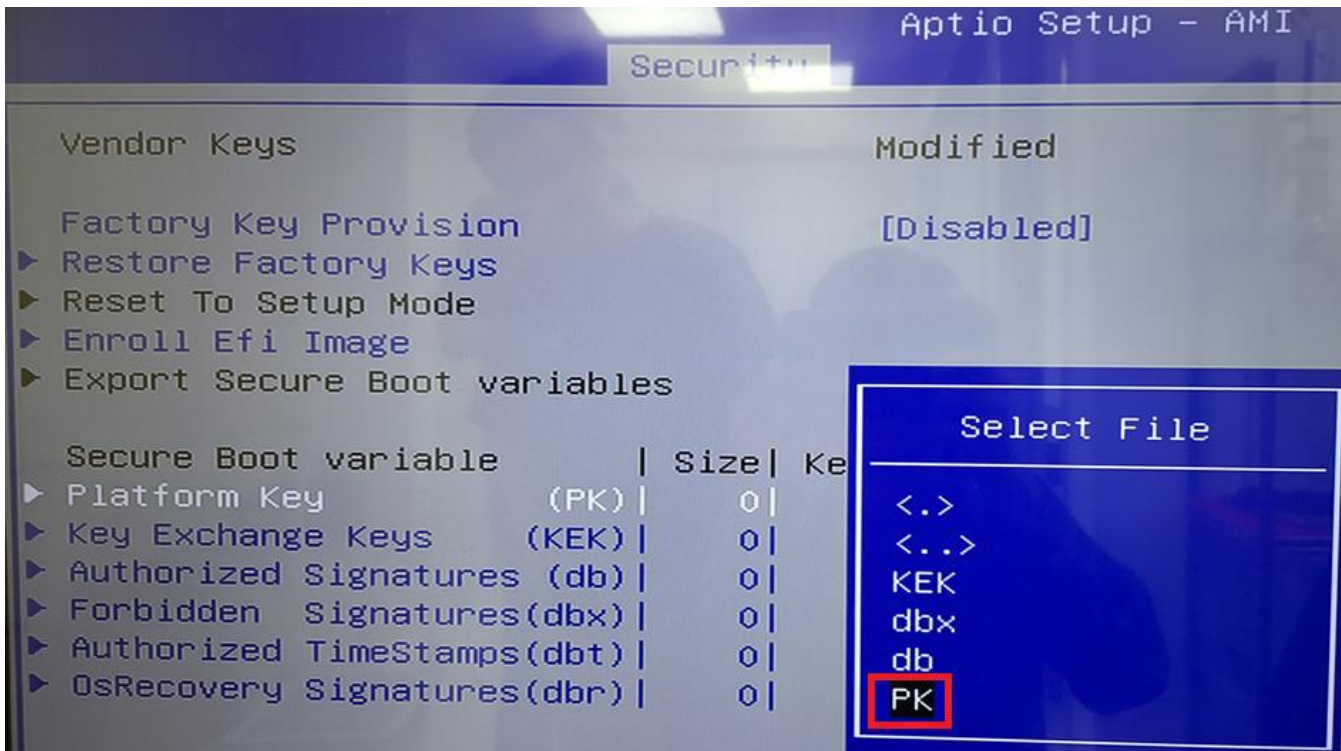

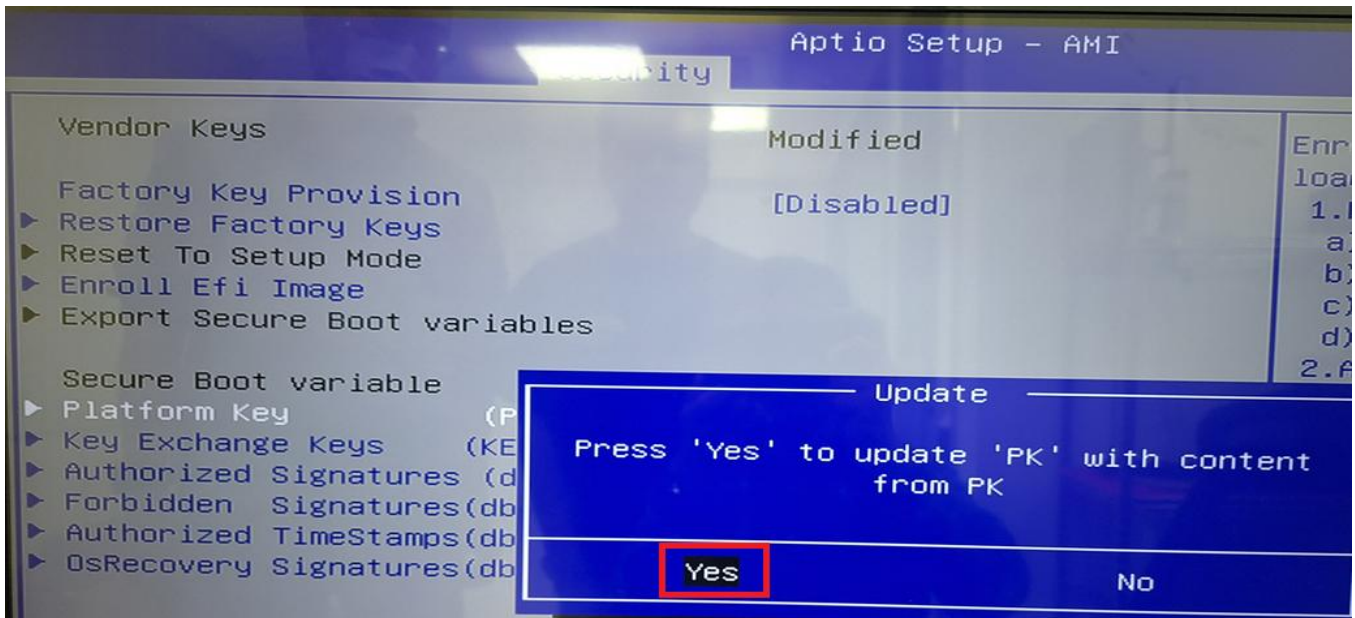

Select "No"

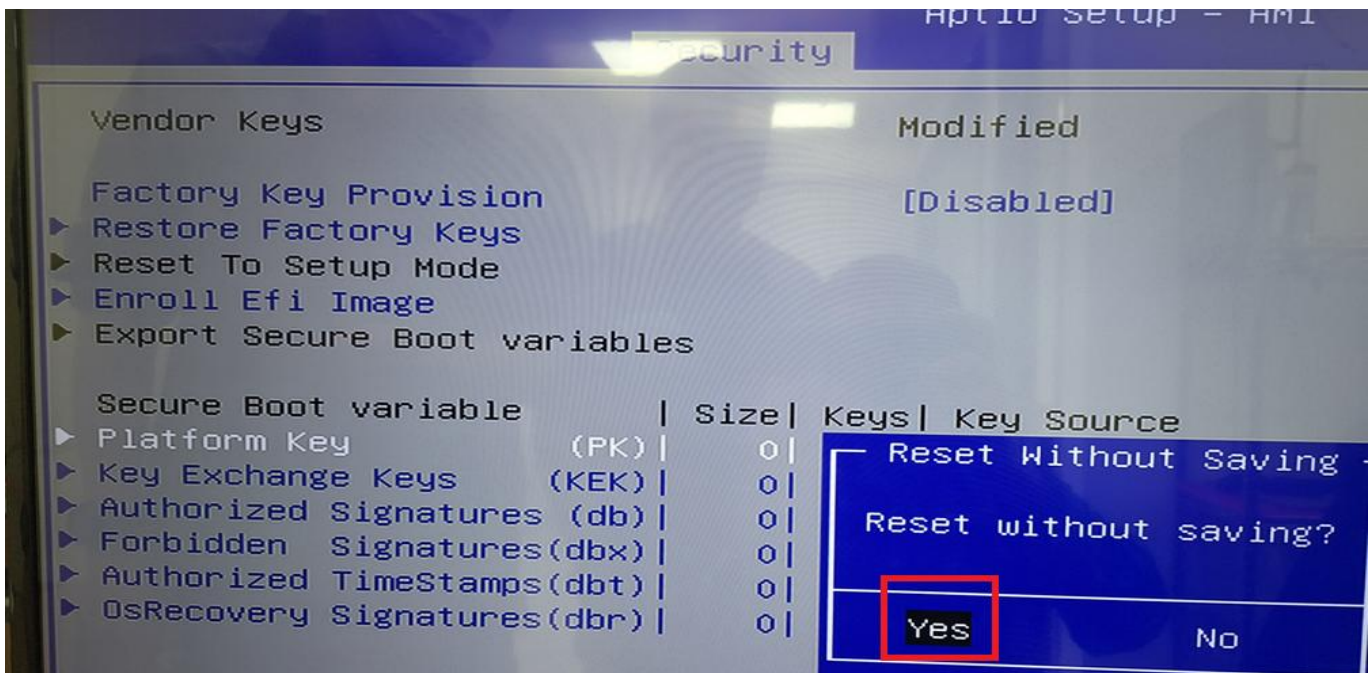

Find your USB drive to select your Keys (PK).

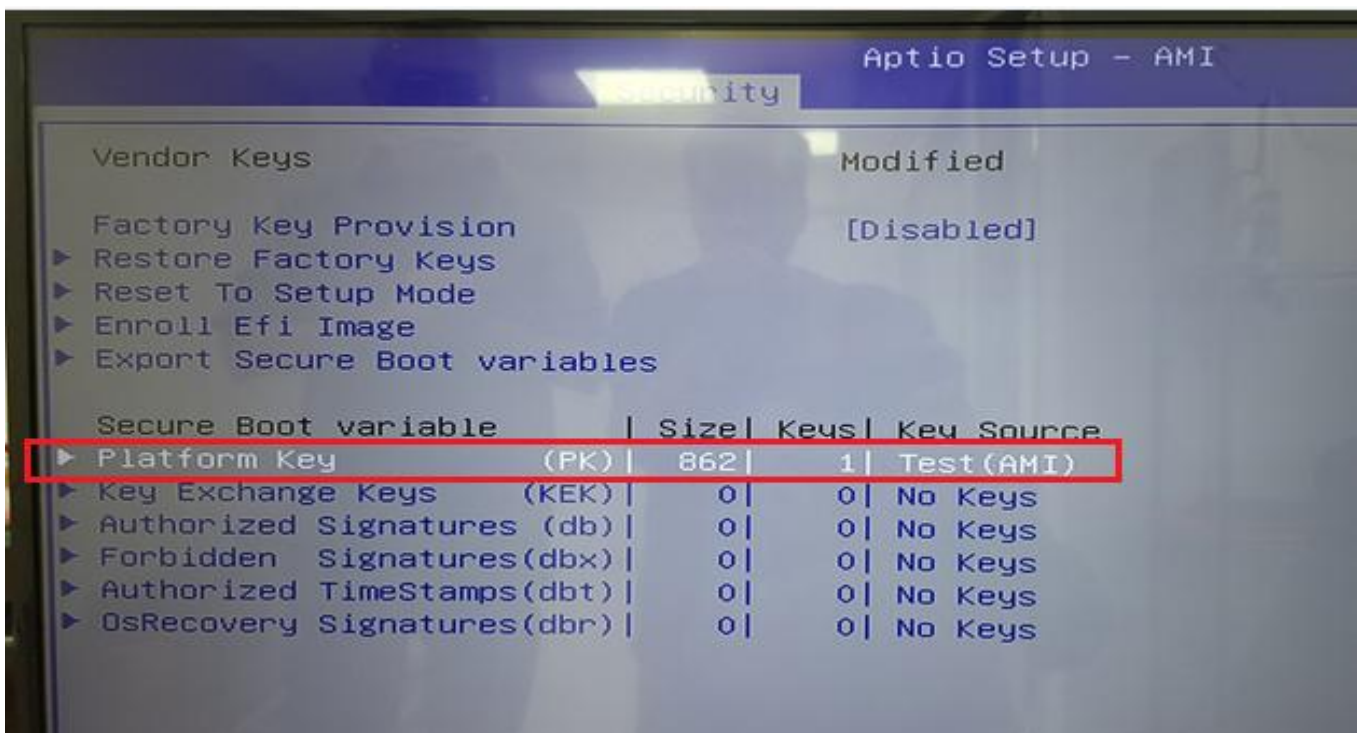

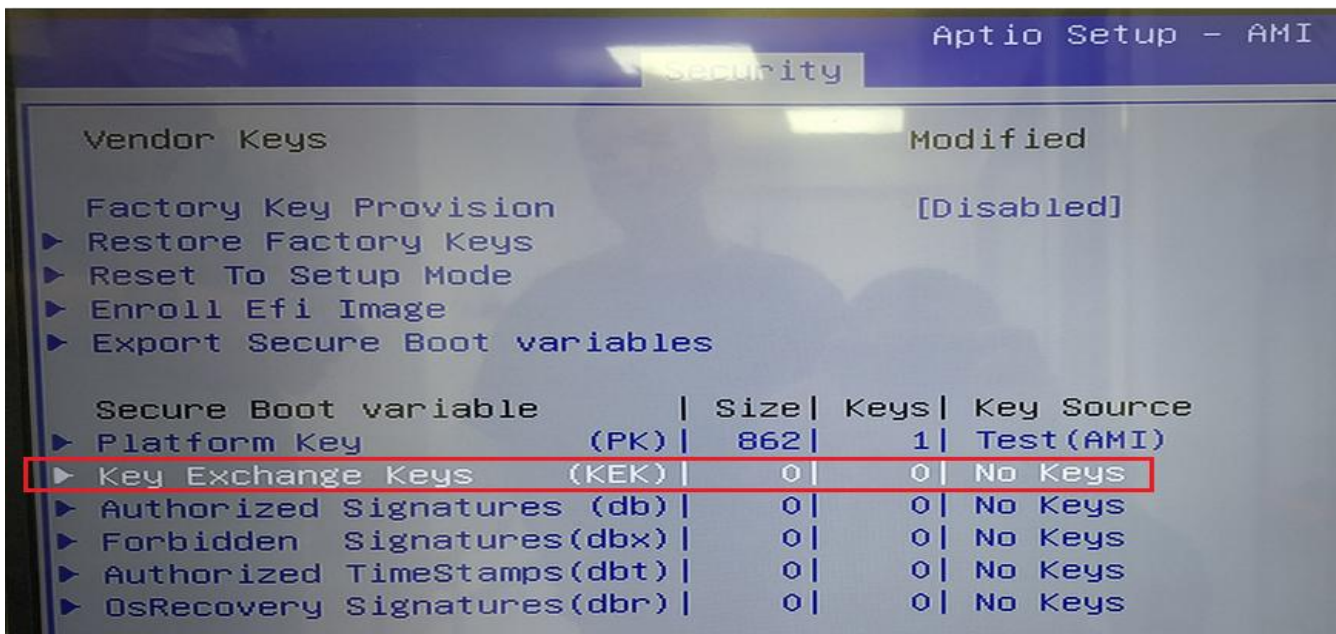

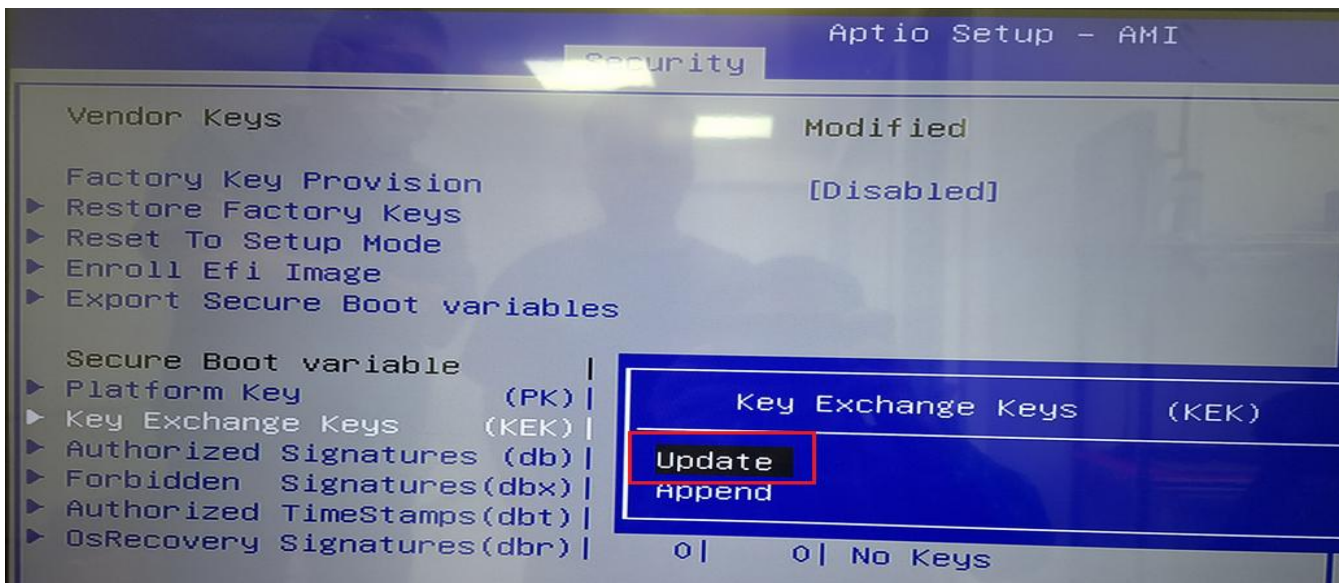

The image below shows that the Platform Key (PK) has already been successfully enrolled.

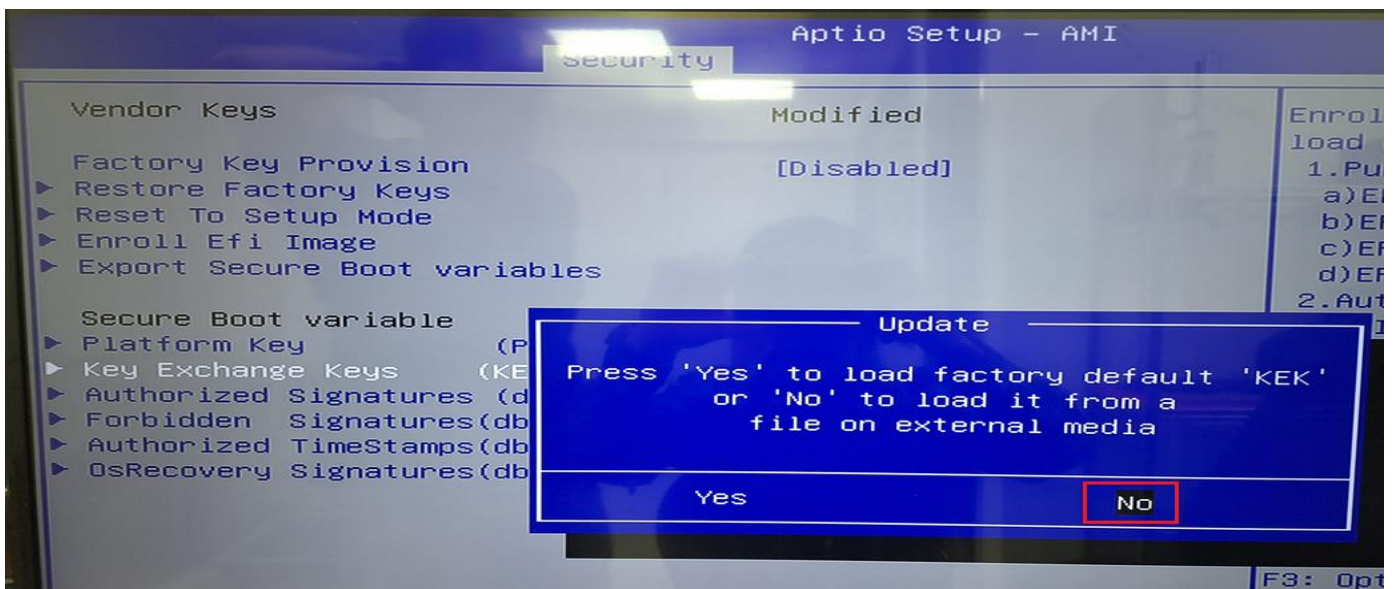

4. Select "Key Exchange Keys (KEK)", enter

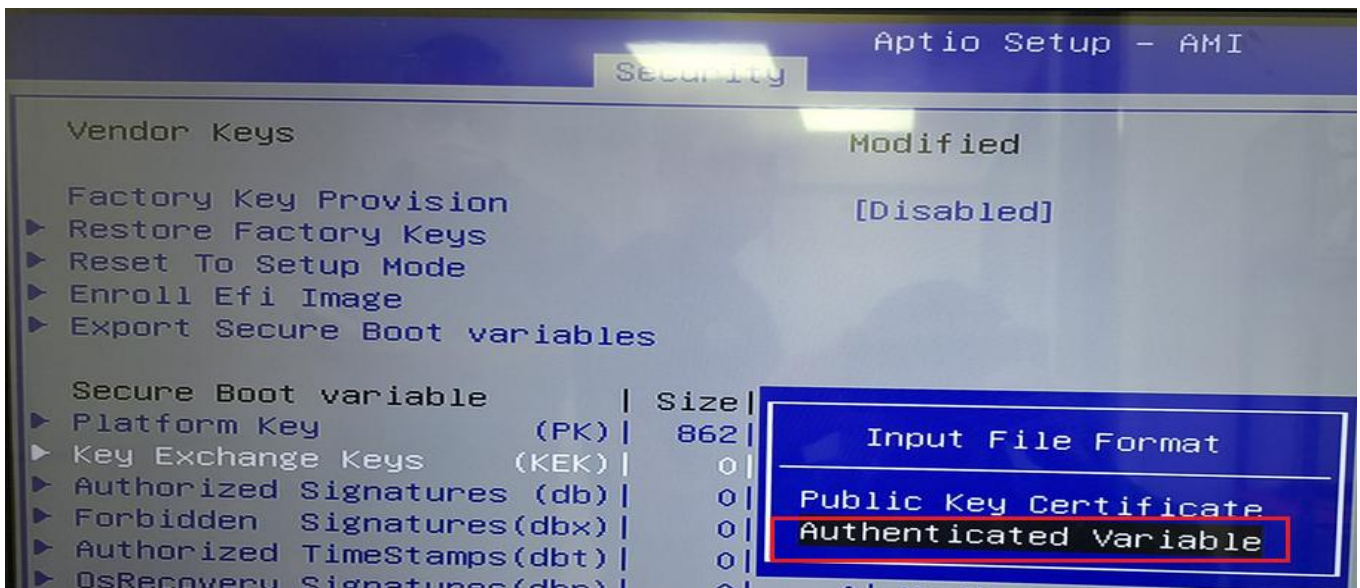

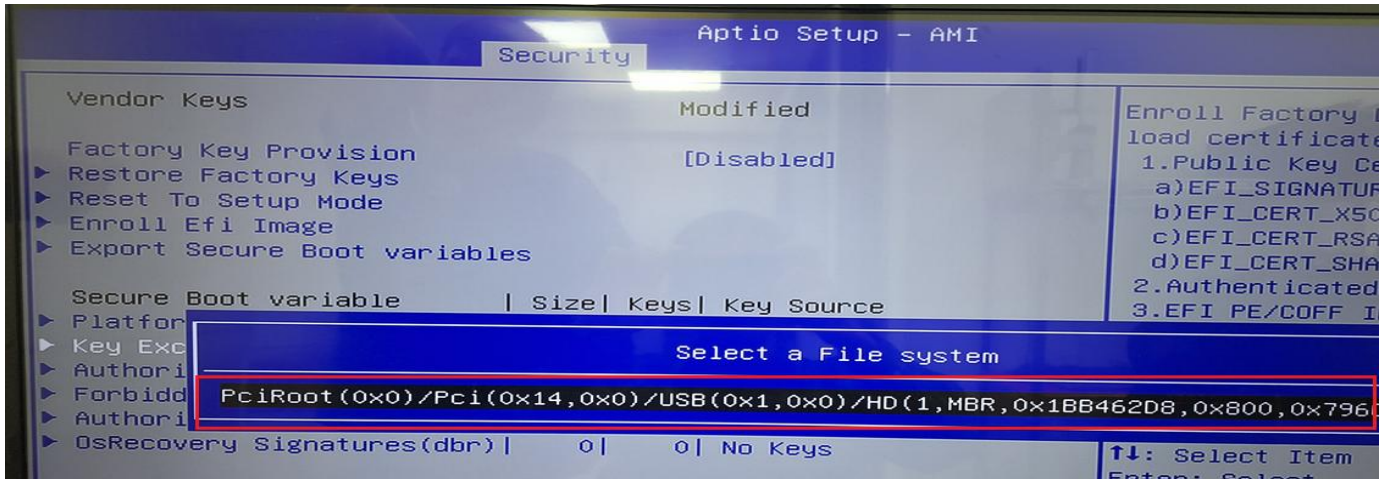

### Select "Update"

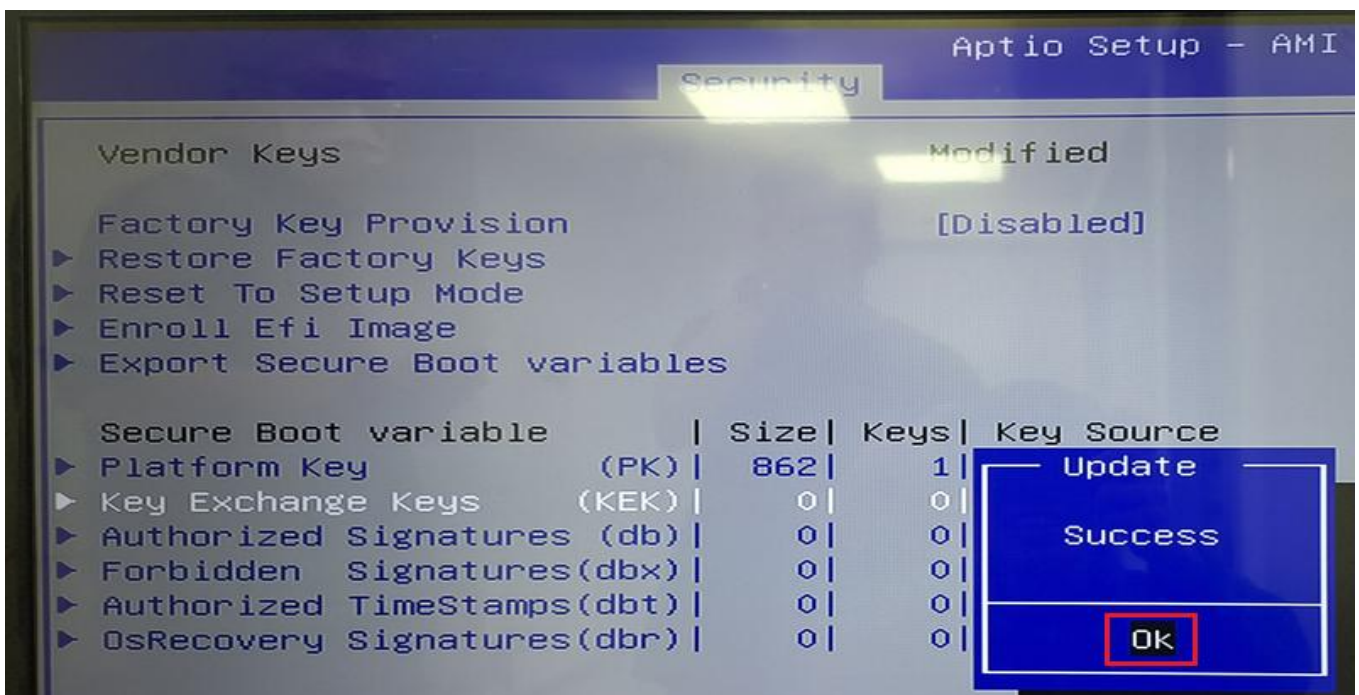

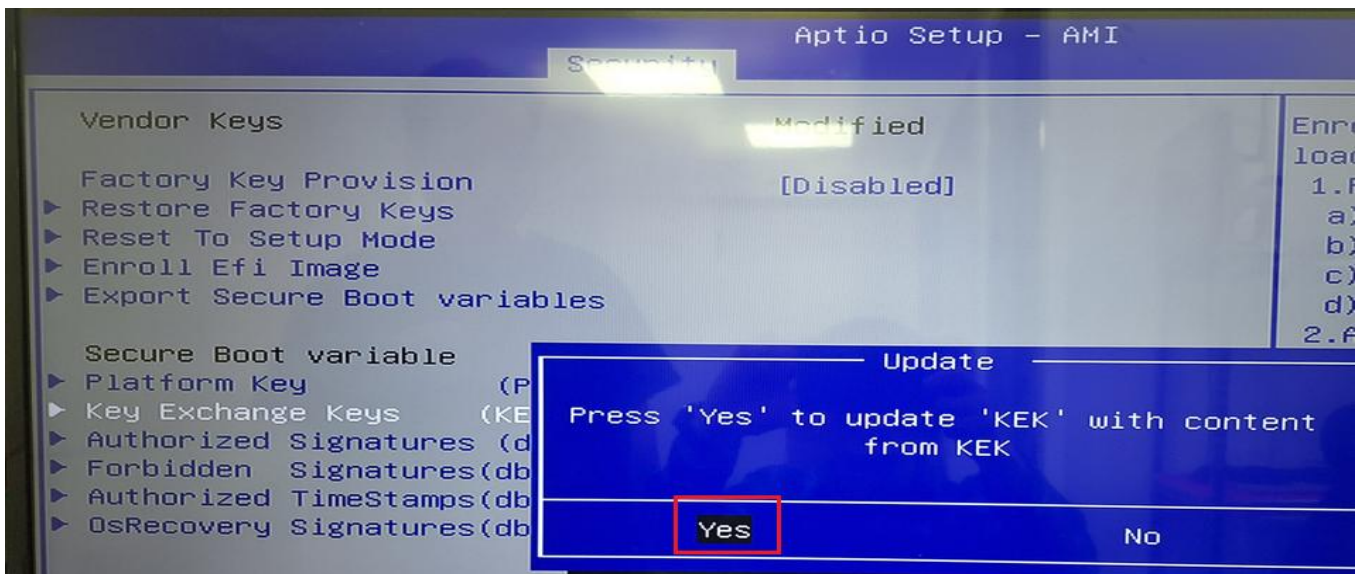

### Select "No"

**Find your USB drive to select your Key Exchange Keys (KEK).**

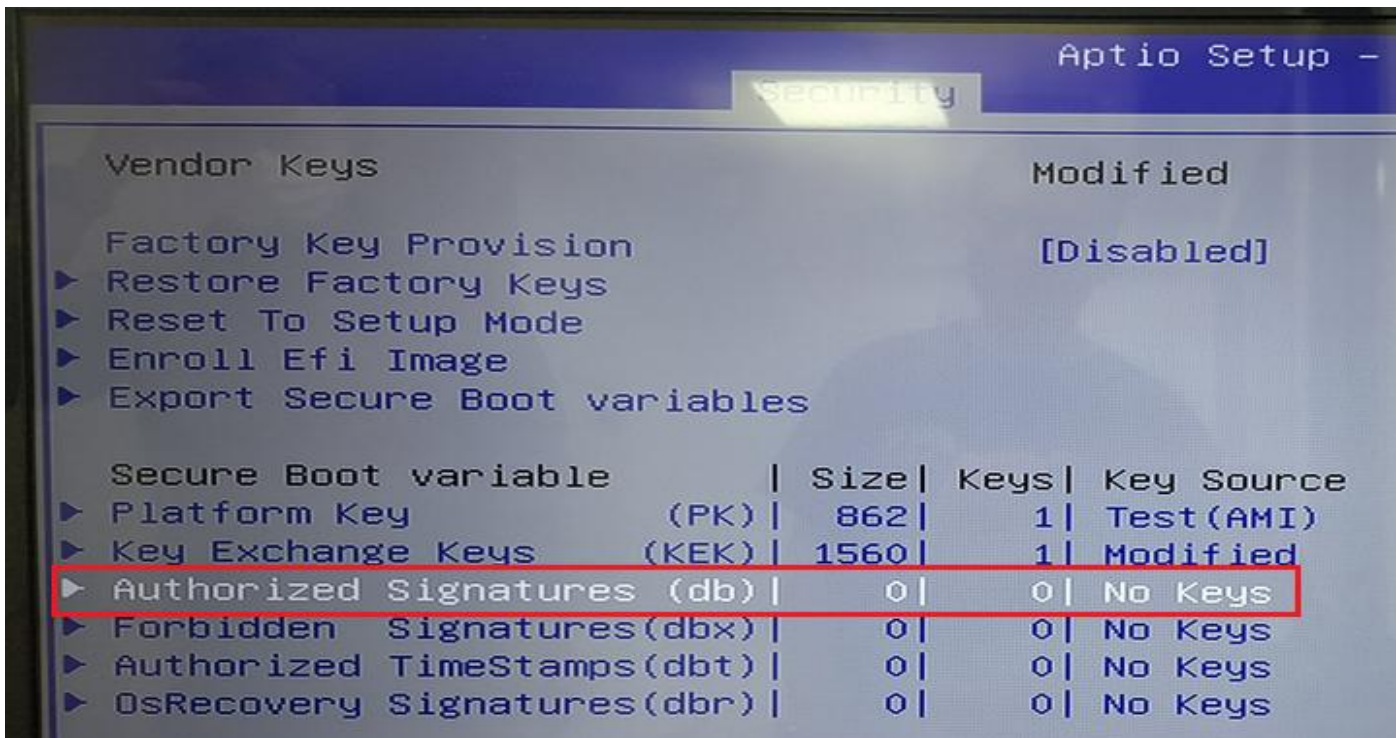

The image below shows that the Key Exchange Keys (KEK) has already been successfully enrolled.

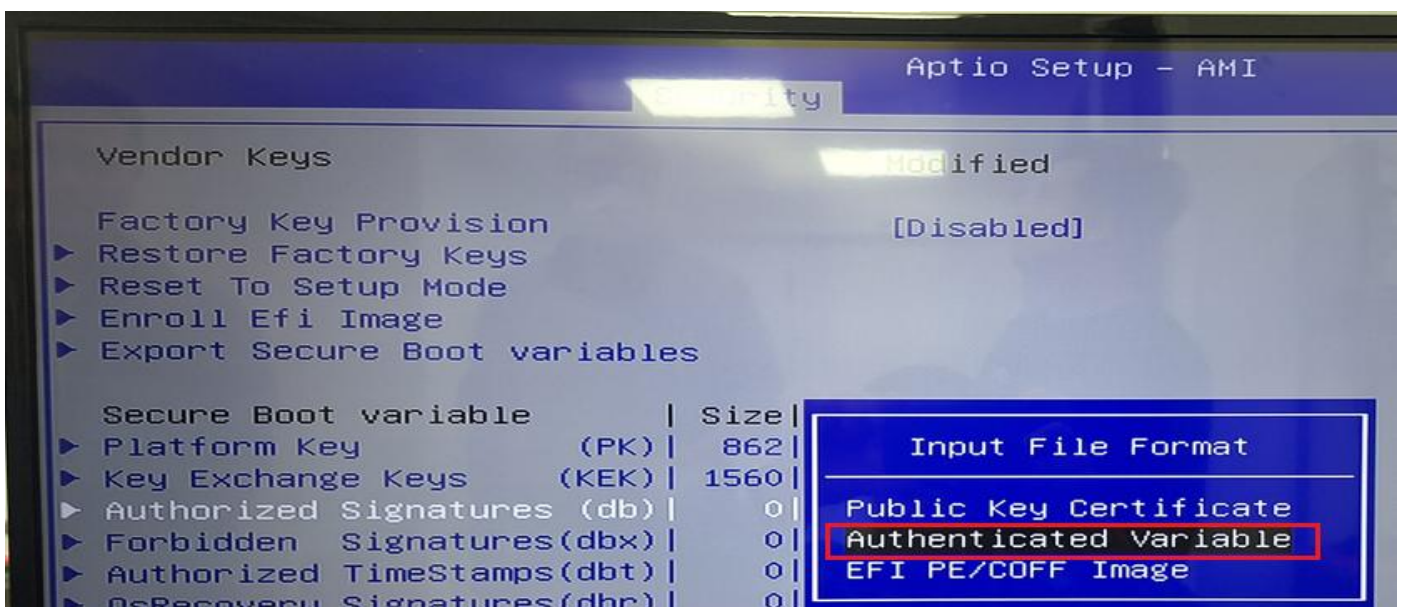

5. Select “Authorized Signatures (db)” , enter

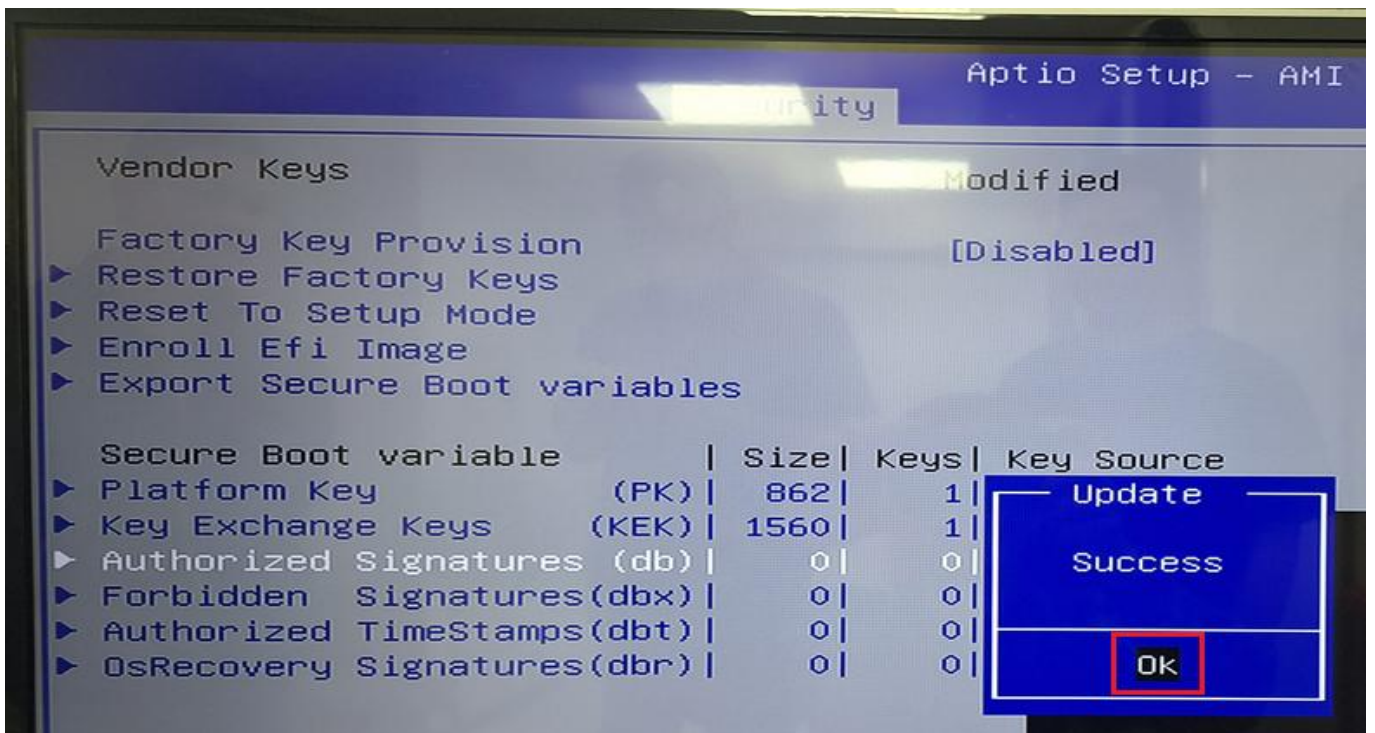

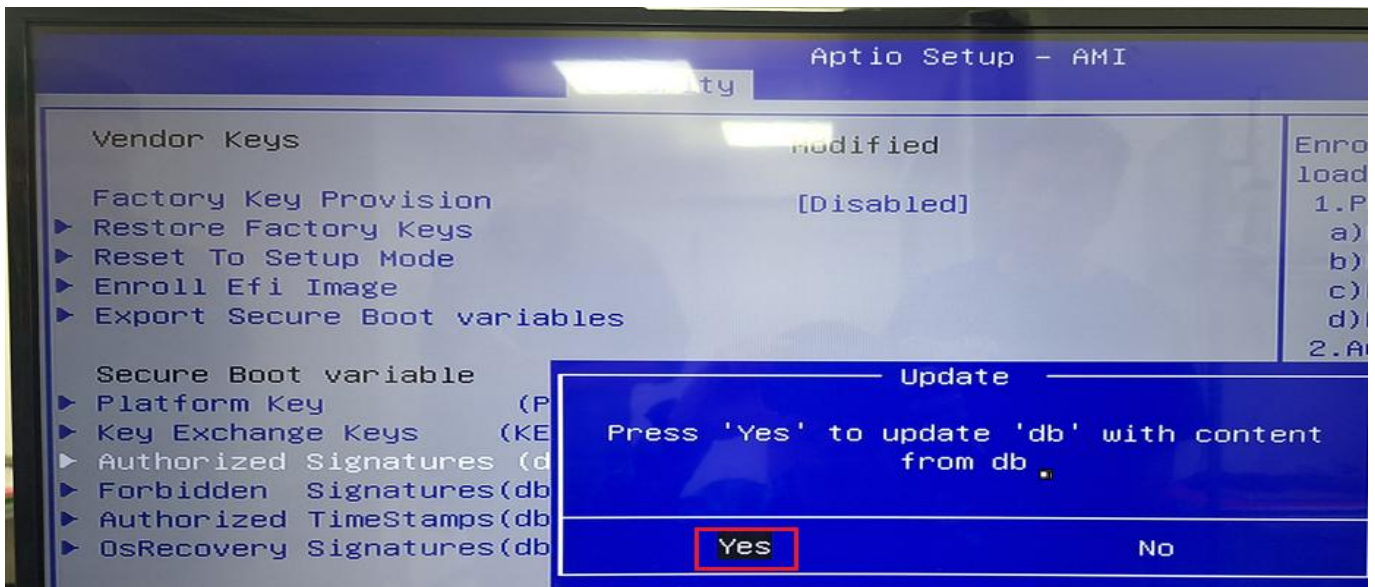

Select “Update”

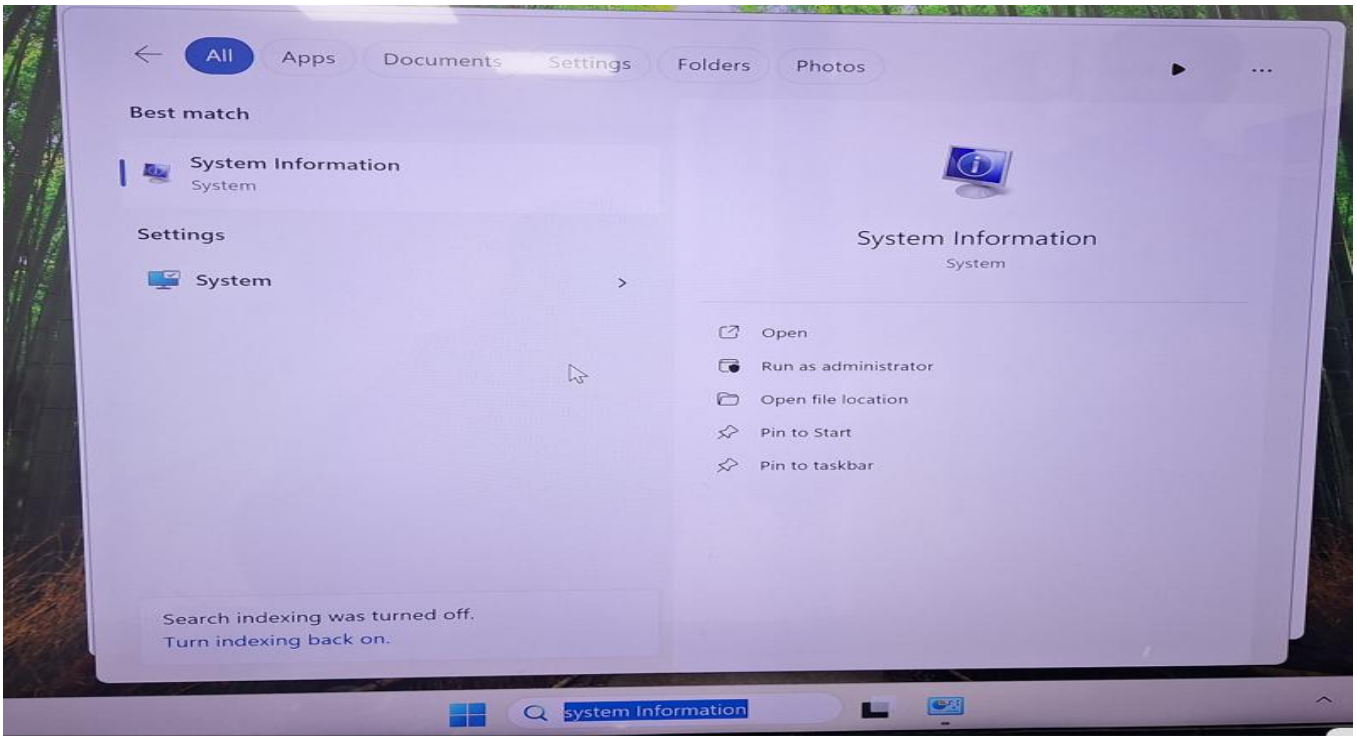

Select “No”

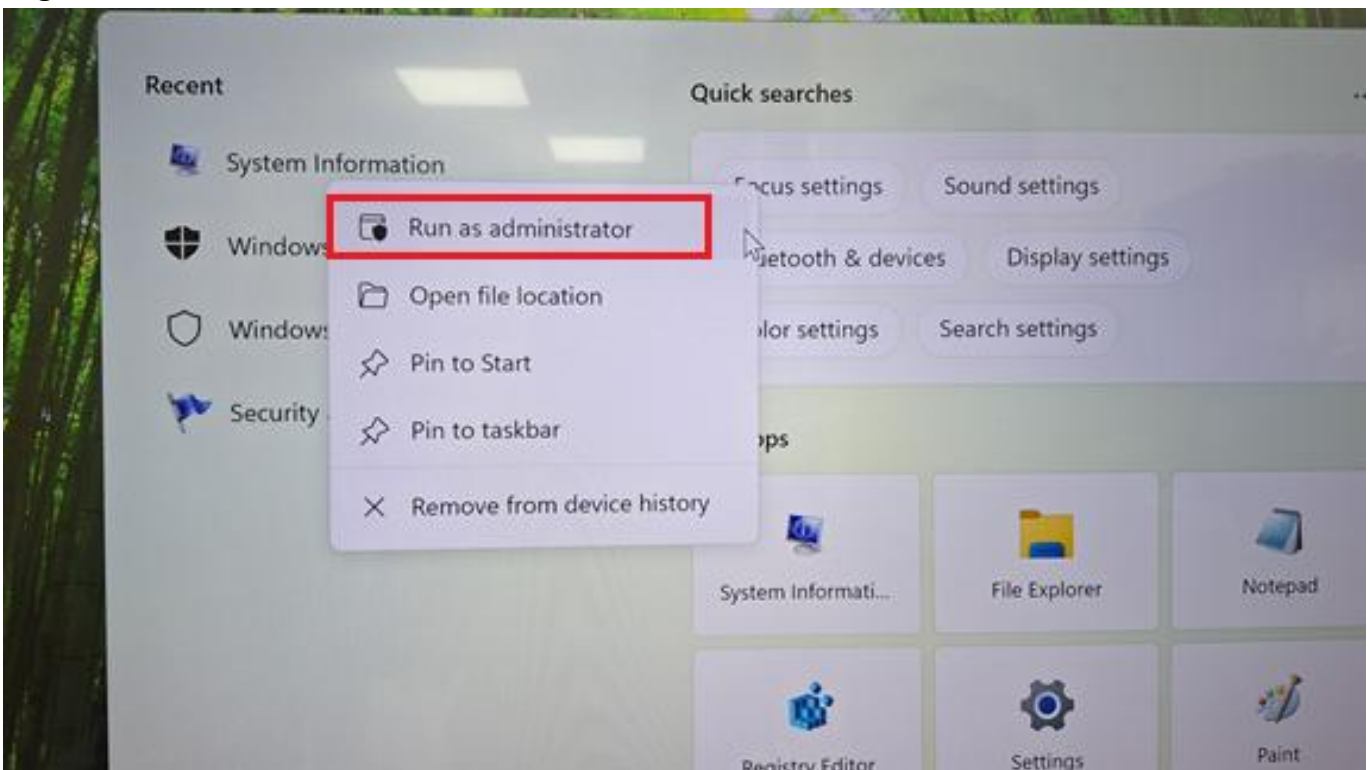

Once the above steps are completed, the key enrollment process is finished.

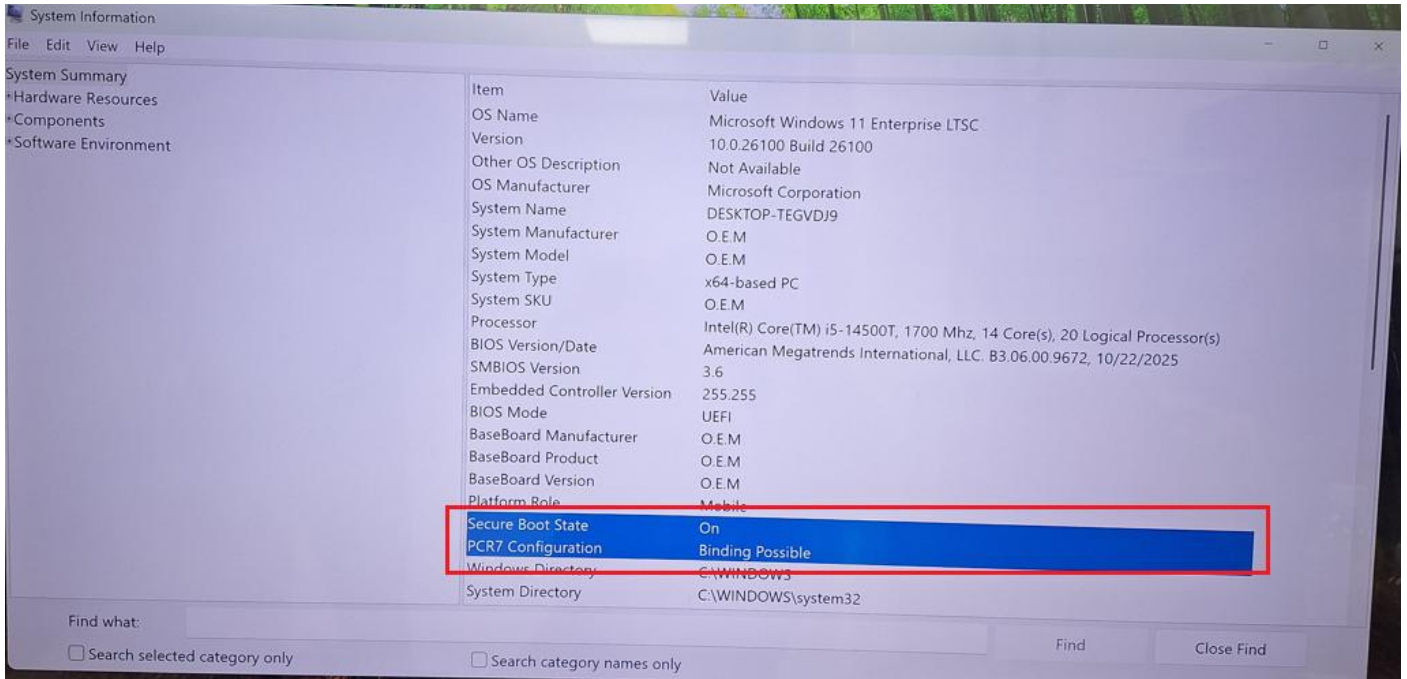

6. To verify that Secure Boot is functioning properly in the Windows environment. Search "System information" in Windows.

Right-click, and then select “Run as administrator”

Verify that Secure Boot State is shown as On, and PCR7 Configuration is listed as Binding Possible.

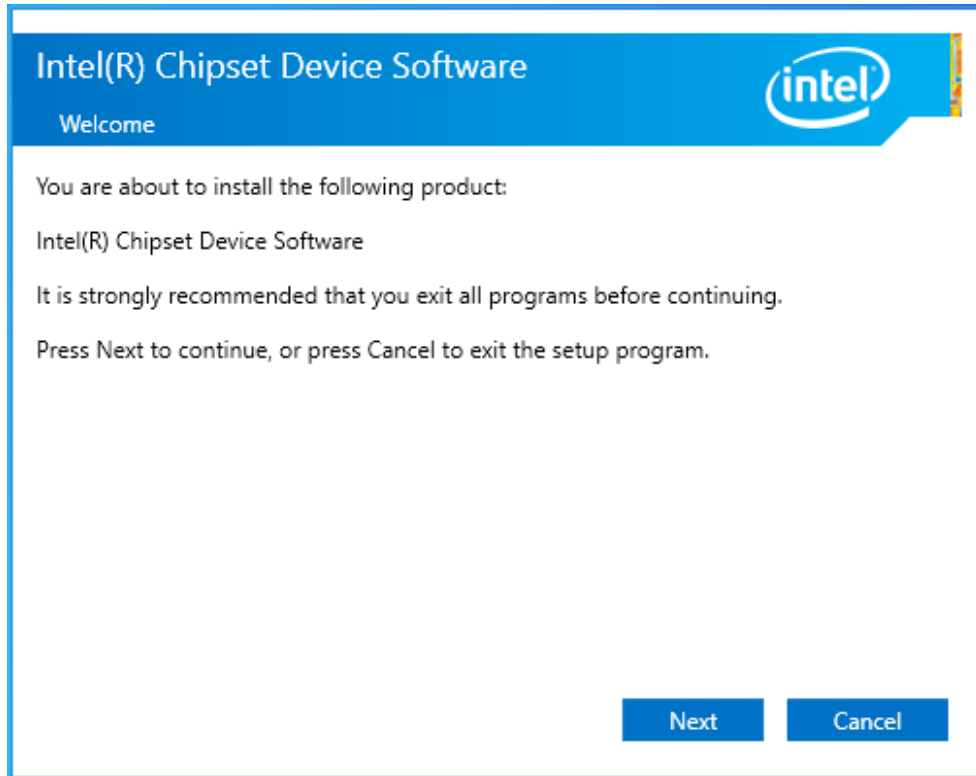

**Thank you for going through this instruction. Following it will help you complete the setup smoothly**

## 4.1 Intel Chipset

To install the Intel chipset driver, please follow the steps below.

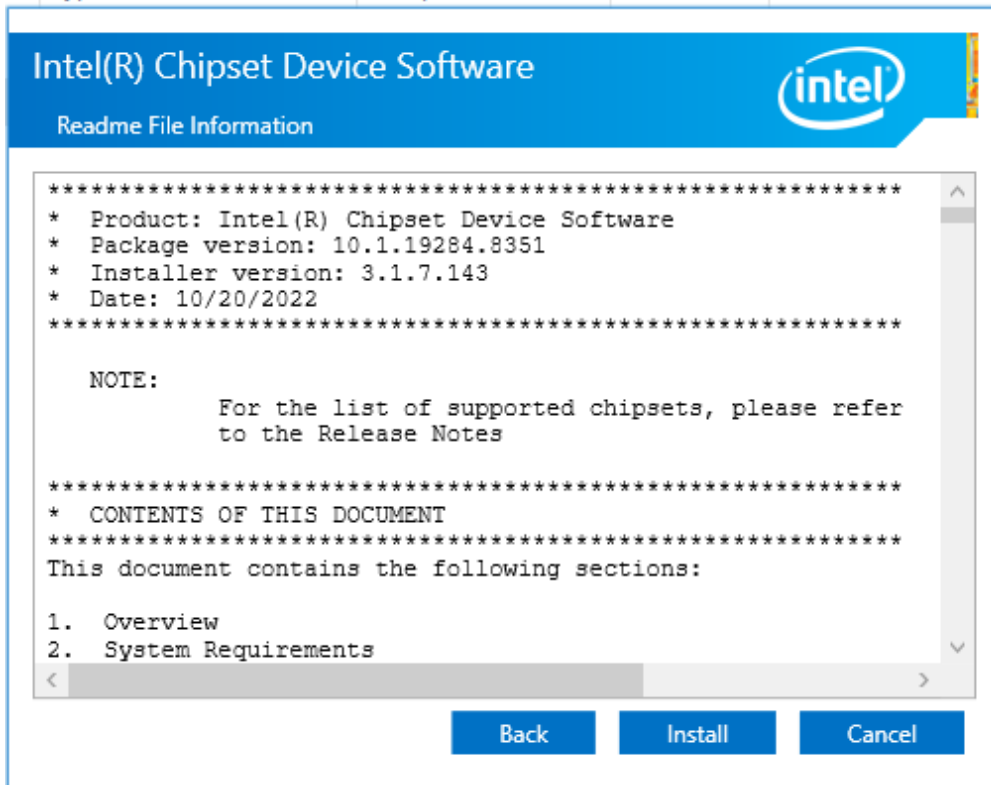

Step 1. Here is welcome page. Please make sure you save and exit all programs before install. Click **Next**.

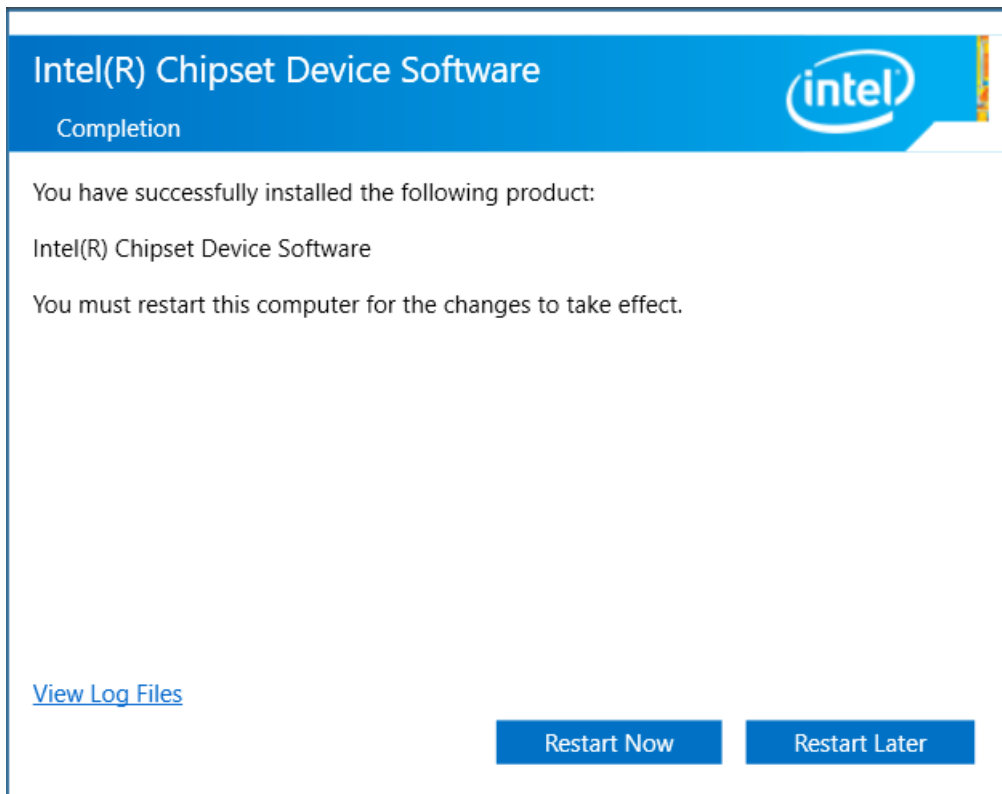

Step 2. Read the license agreement. Click **Accept** to accept all of the terms of the license agreement.

Step 3. Click **Install** to begin the installation.

Step 4. Select **Restart Now** to reboot your computer for the changes to take effect.

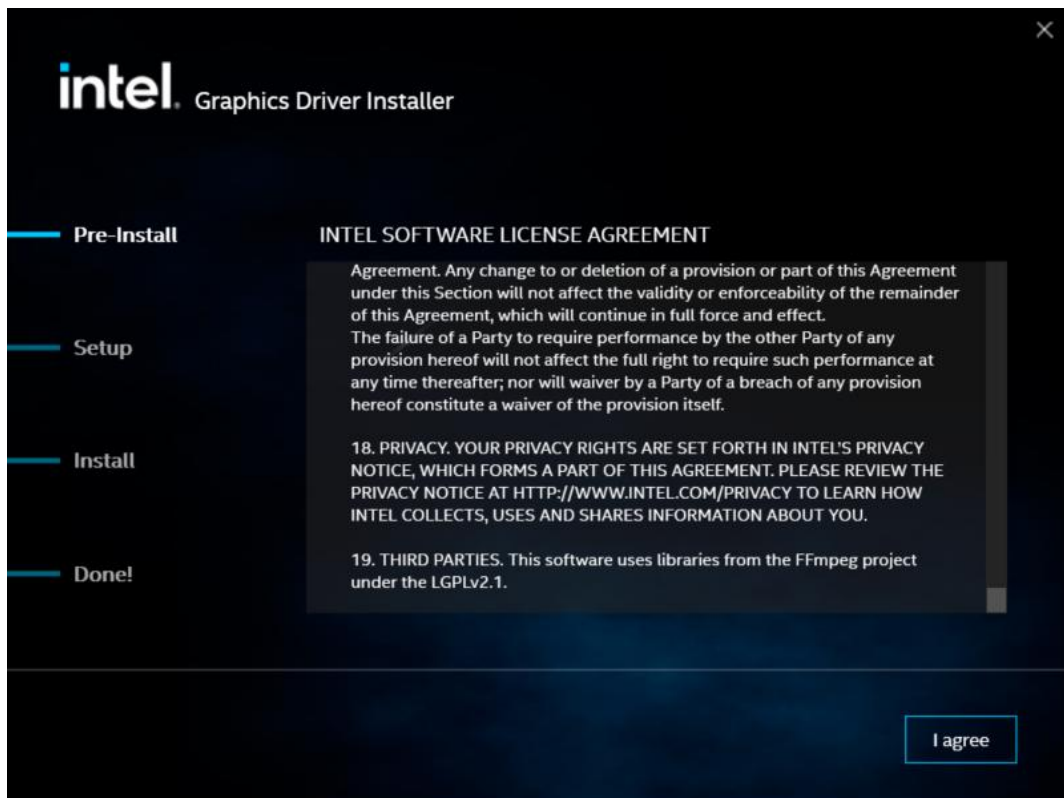

## 4.2 Intel® HD Graphics Chipset

To install the Intel® HD Graphics Chipset, please follow the steps below.

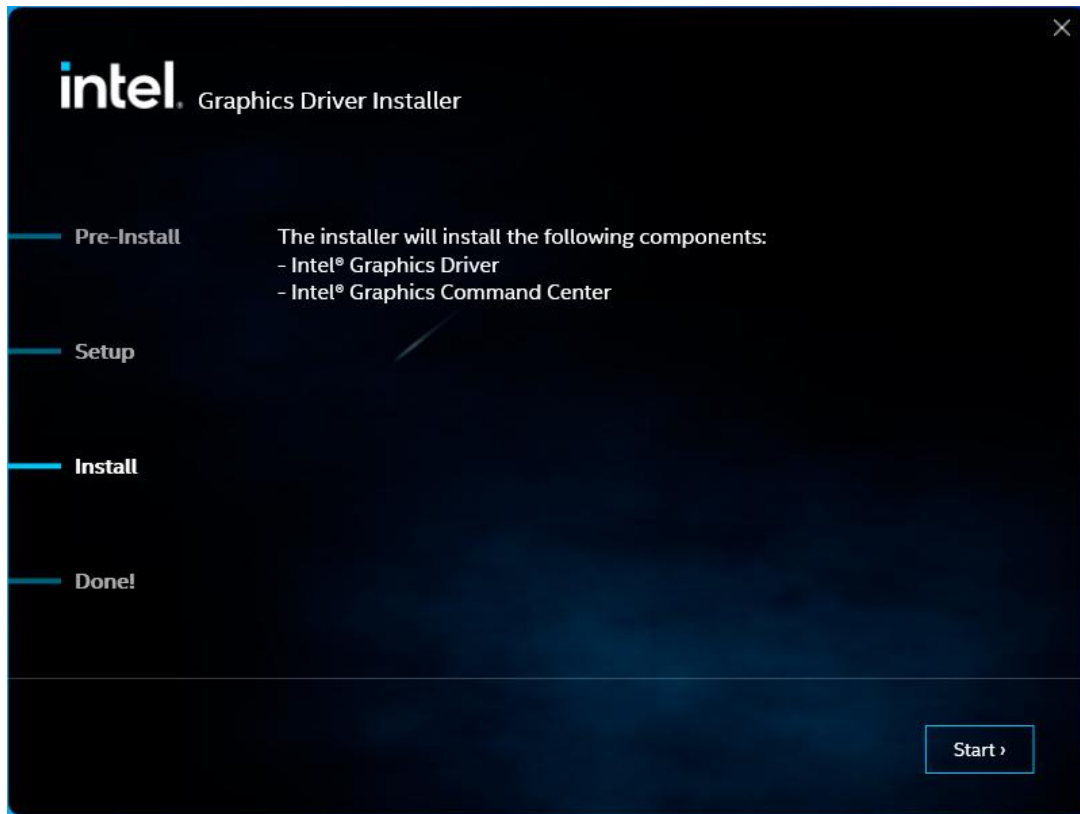

**Step 1.** Click **Begin installation**.

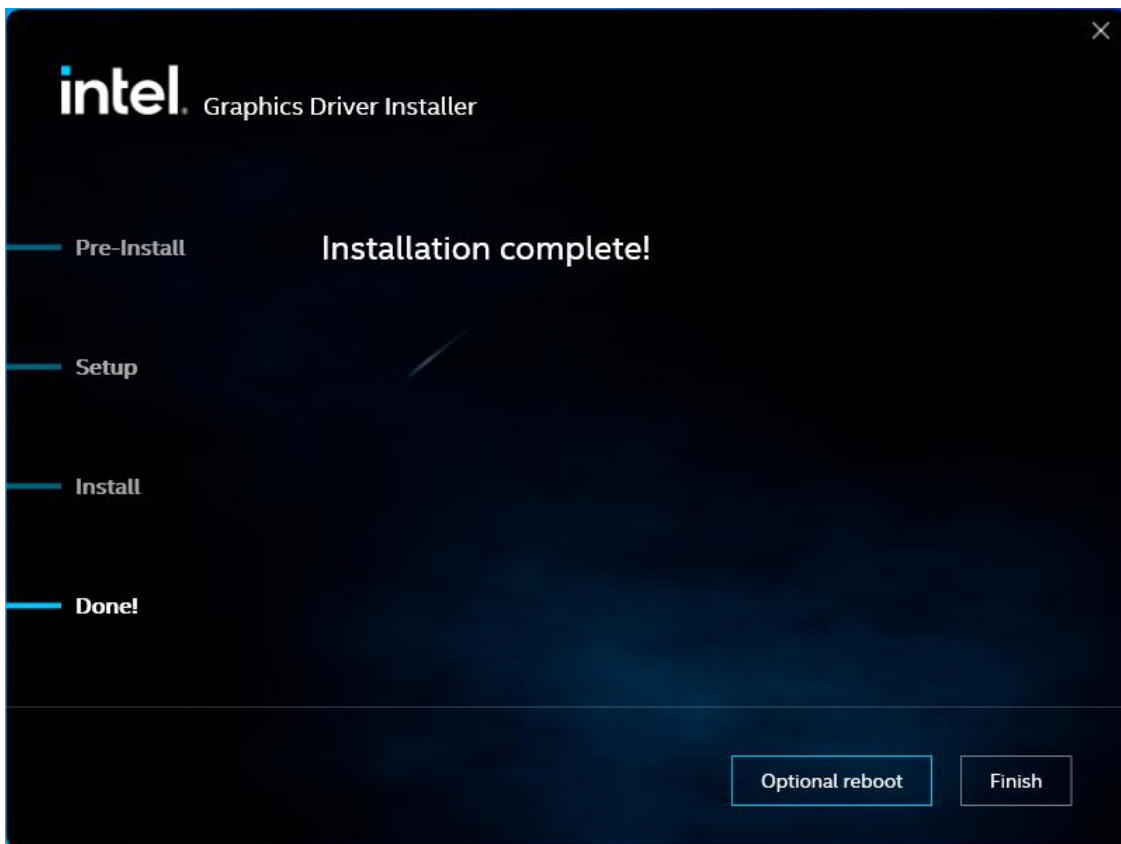

**Step 2.** Read the license agreement. Click **I agree** to accept all the terms of the license agreement.

**Step 3.** Choose **Install** function and Click **Start** to setup program.

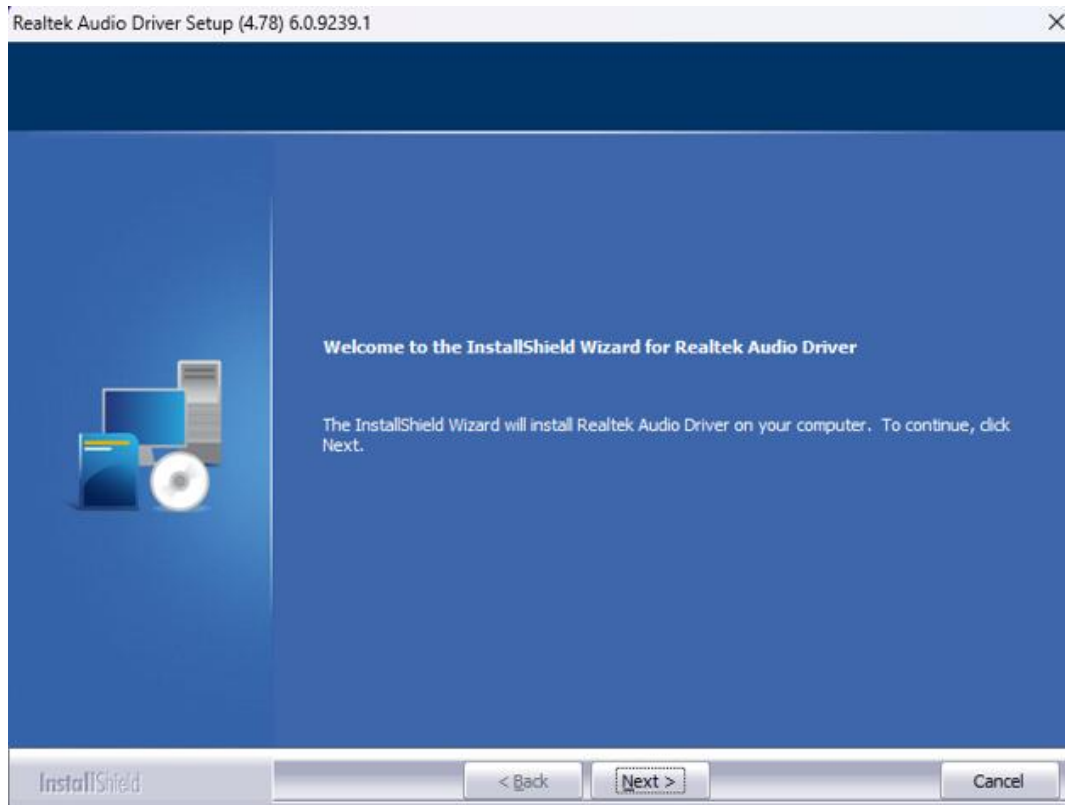

**Step 4.** Click **Finish** to complete installation.

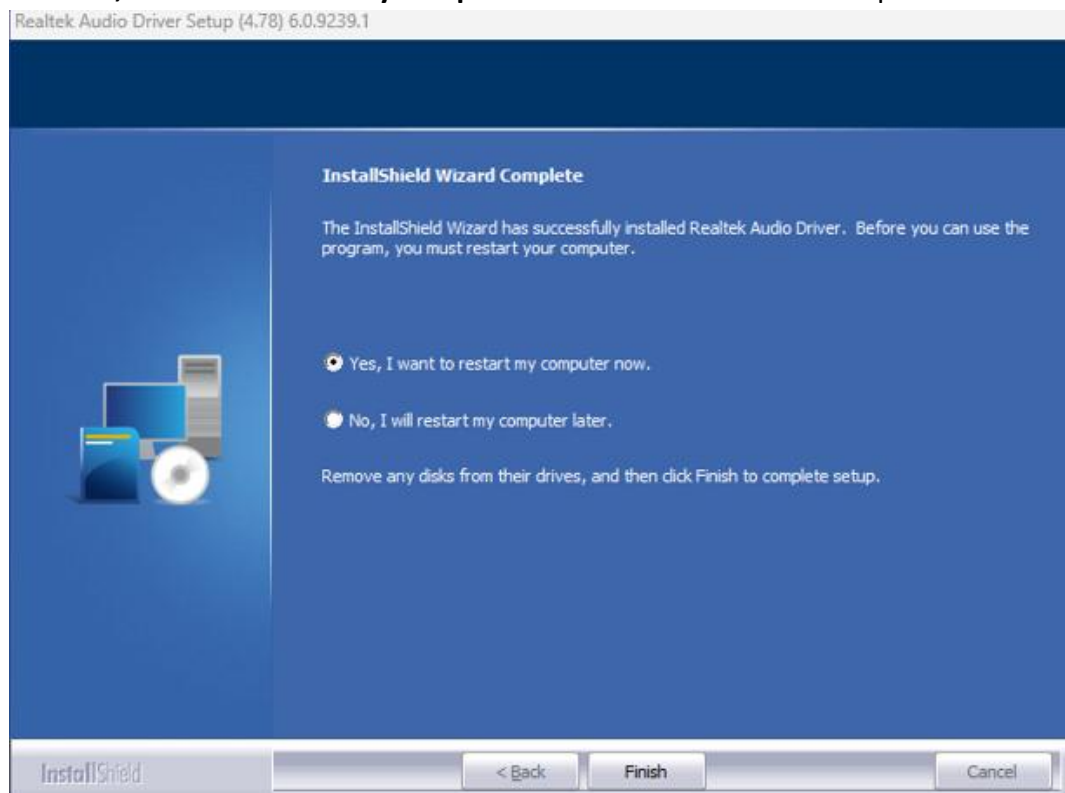

## 4.3 Audio Chipset

To install the Realtek HD Audio Driver, please follow the steps below.

**Step 1.** Click **Next** to continue.

**Step 2.** Click **Yes, I want to restart my computer now.** Click **Finish** to complete the installation.

## 4.4 I LAN Driver

To install the LAN driver, please follow the steps below.

**Step 1.** Click **Zip File** to continue.

**Step 2.** Click **OK** to begin the installation.

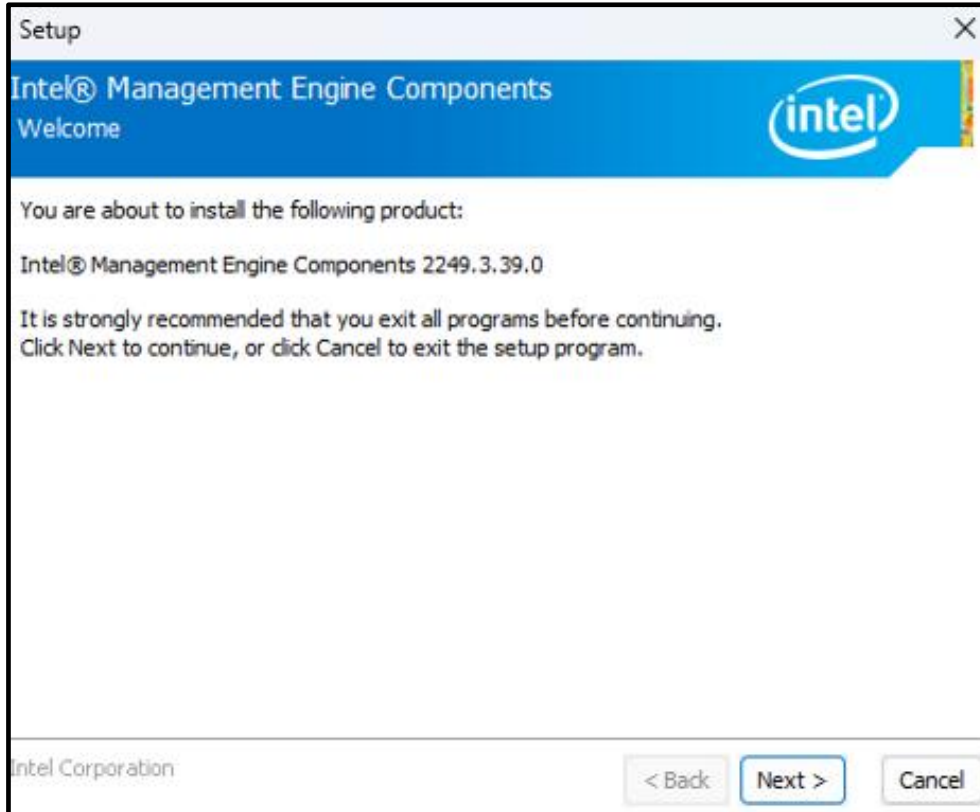

**Step 3.** Click **Close** to finish installation.

## 4.5 Intel® Management Engine Interface

To install the Intel® Management Engine Interface, please follow the steps below.

**Step 1.** Select setup language you need. Click **Next** to continue.

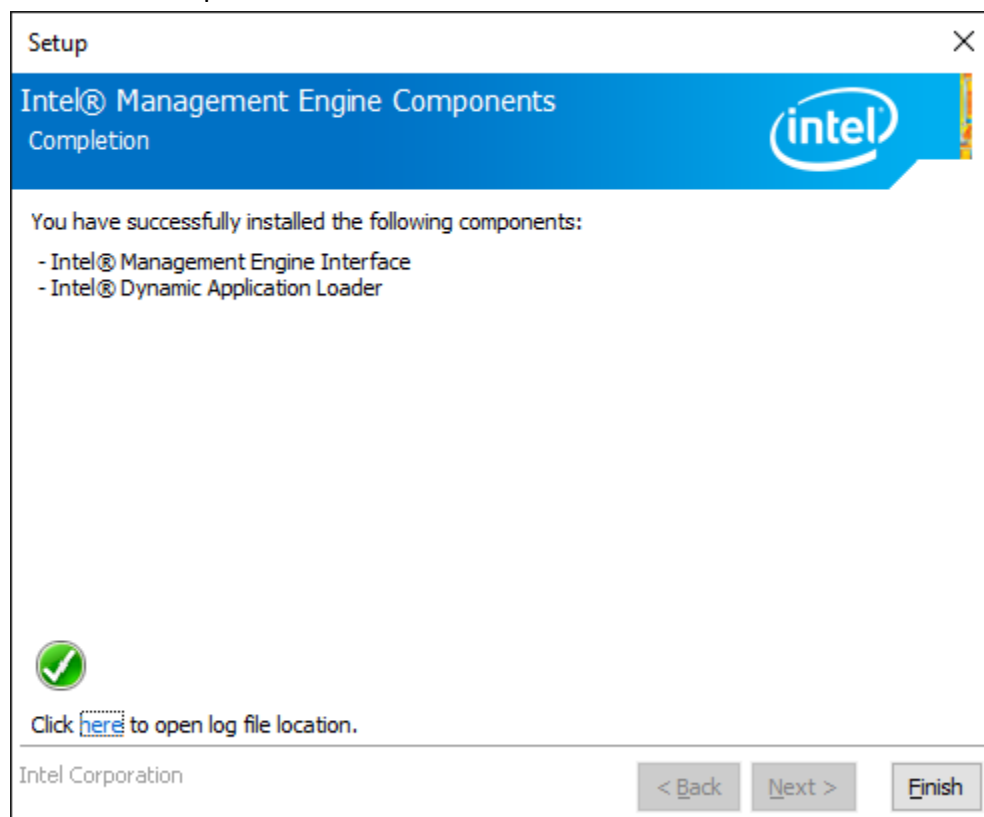

**Step 2.** Choose **I accept the terms in the License Agreement** and click **Next** to begin the installation.

**Step 3.** Click **Next** to continue.

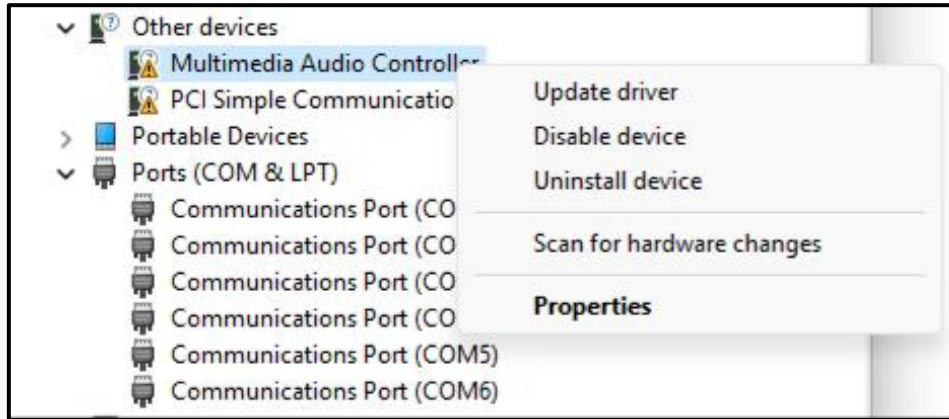

**Step 4.** Click **Finish** to complete the installation.

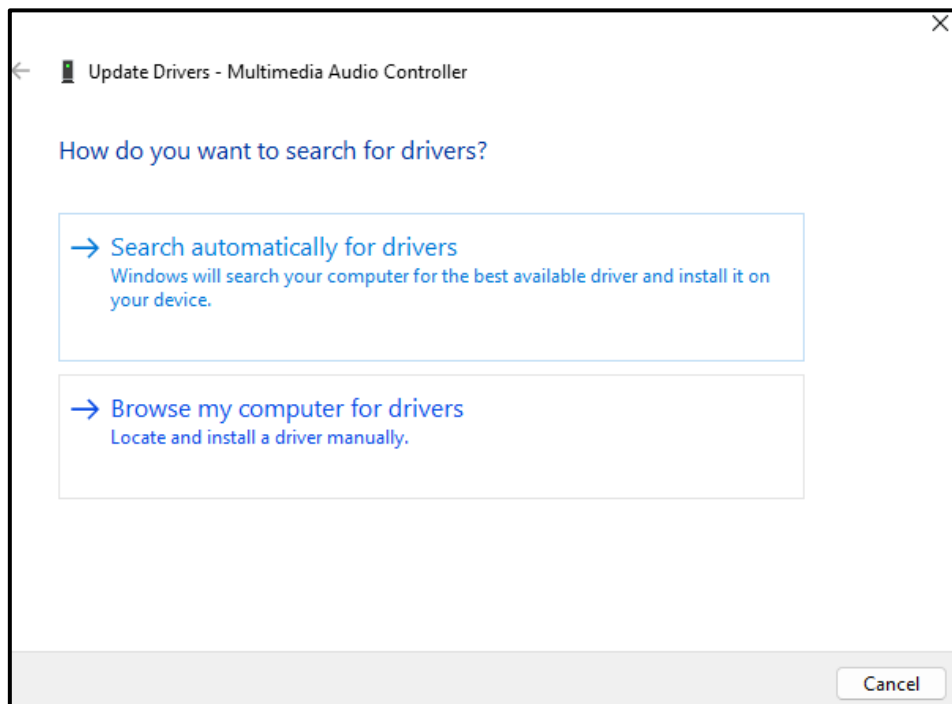

## 4.6 Intel® Speed Select Technology

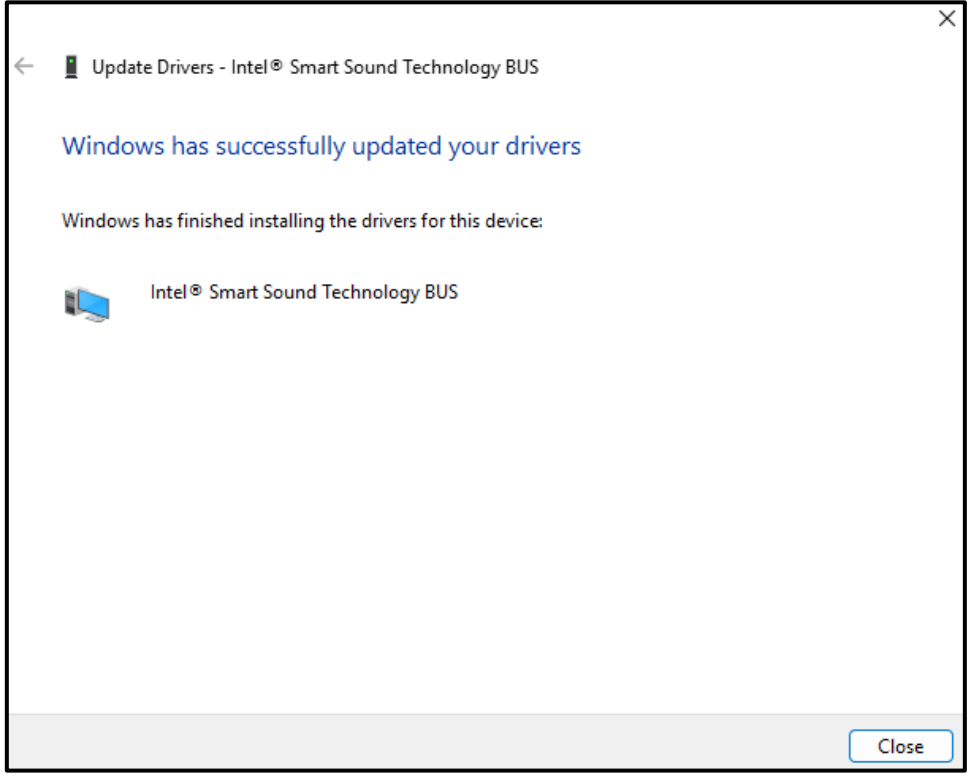

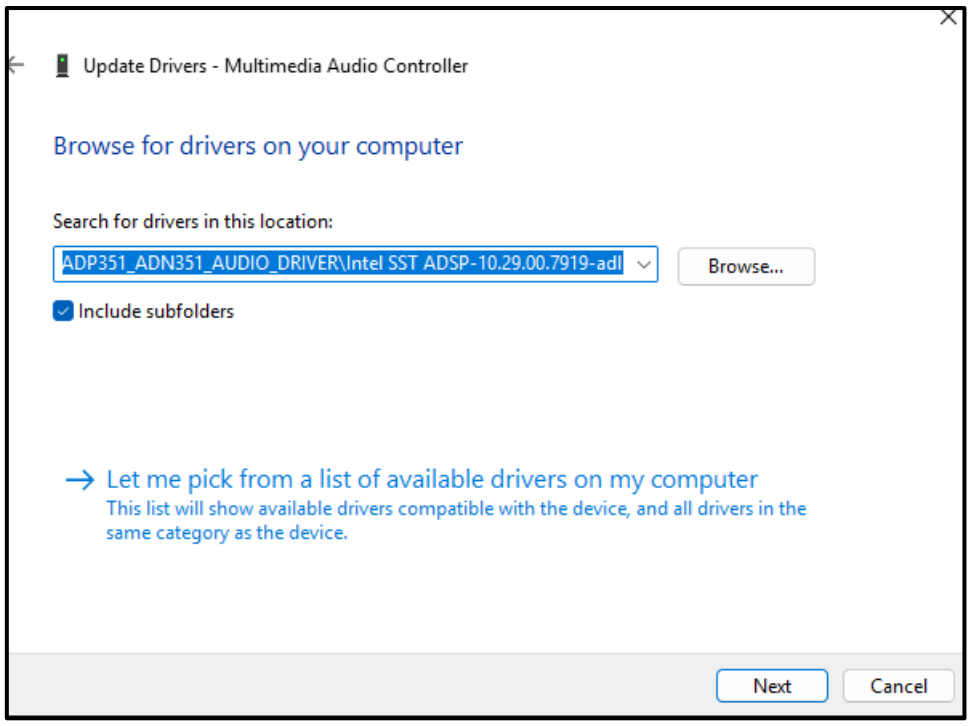

To install the Intel® Speed Select Technology, please follow the steps below.

**Step 1.** Enable Device Manager under Window and you could see there are exclamation mark on Audio Control, please right click you mouse and pop up an property window, then select “update driver”

**Step 2.** Select “Browse my computer for drivers” then select driver from your driver folder then install it.

## 4.7 Resistive Touch Screen Installation

This chapter describes how to install drivers and other software that will allow your Resistive touch screen work with different operating systems.

### 4.7.1 Windows 10 Universal Driver Installation for PenMount 6000 Series

Before installing the Windows 10 driver software, you must have the Windows 10 system installed and running on your computer. You must also have one of the following PenMount 6000 series controller or control boards installed: PM6500, PM6300.

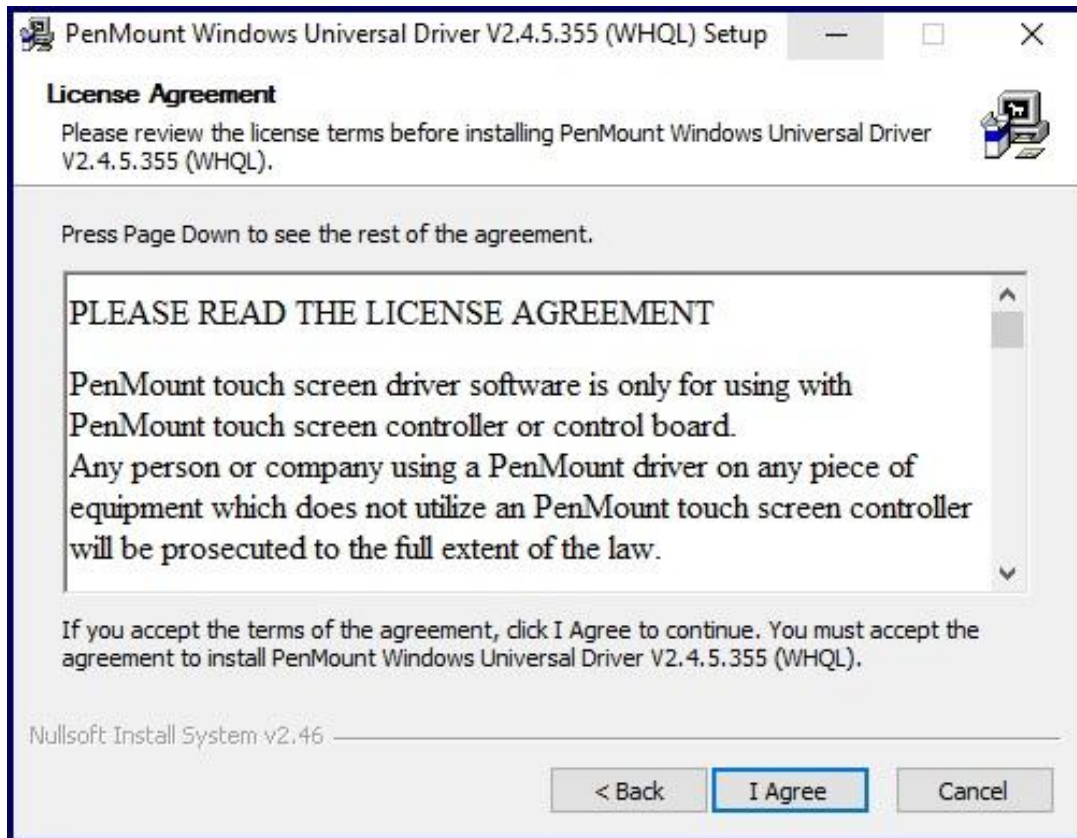

### Resistive Touch

If you have an older version of the PenMount Windows 7 driver installed in your system, please remove it first. Follow the steps below to install the PenMount DMC6000 driver.

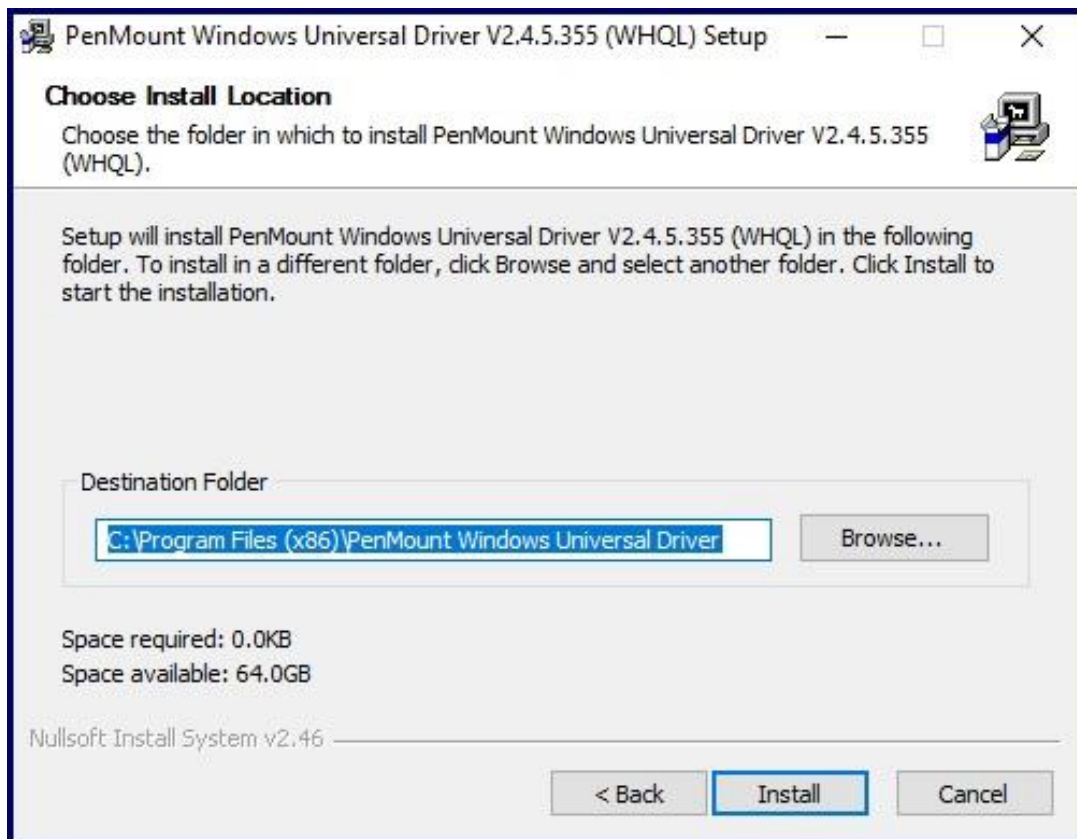

**Step 1.** Click **Next** to continue.

**Step 2.** Read the license agreement. Click **I Agree** to agree the license agreement.

**Step 3.** Choose the folder in which to install PenMount Windows Universal Driver. Click **Install** to start the installation.

**Step 4.** Click **Yes** to continue.

**Step 5.** Click **Finish** to complete installation.

## 4.7.2 Software Functions

### Resistive Touch

Upon rebooting, the computer automatically finds the new 6000 controller board. The touch screen is connected but not calibrated. Follow the procedures below to carry out calibration.

1. After installation, click the PenMount Monitor icon “PM” in the menu bar.
2. When the PenMount Control Panel appears, select a device to “Calibrate.”

### PenMount Control Panel (Resistive Touch)

The functions of the PenMount Control Panel are **Device**, **Multiple Monitors**, **Tools** and **About**, which are explained in the following sections.

#### Device

In this window, you can find out that how many devices be detected on your system.

## Calibrate

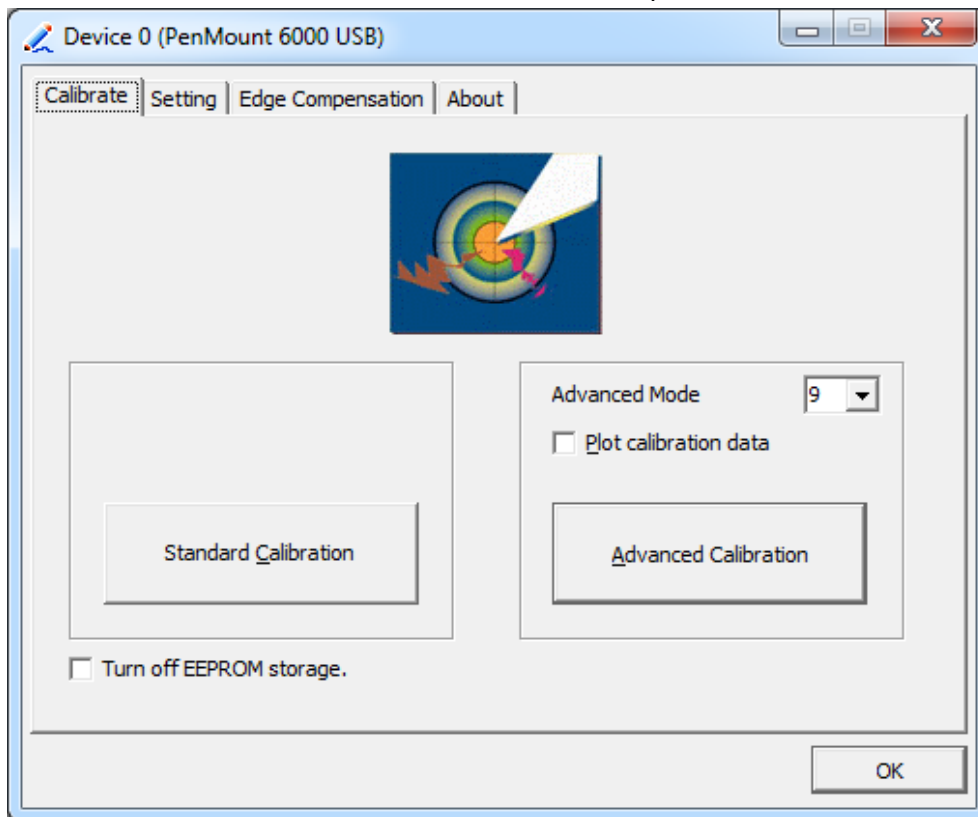

This function offers two ways to calibrate your touch screen. 'Standard Calibration' adjusts most touch screens. 'Advanced Calibration' adjusts aging touch screens.

Standard Calibration	<b>Click this button and arrows appear pointing to red squares. Use your finger or stylus to touch the red squares in sequence. After the fifth red point calibration is complete. To skip, press 'ESC'.</b>
Advanced Calibration	<b>Advanced Calibration uses 4, 9, 16 or 25 points to effectively calibrate touch panel linearity of aged touch screens. Click this button and touch the red squares in sequence with a stylus. To skip, press ESC'.</b>

**Step 1.** Please select a device then click "Configure". You can also double click the device too.

**Step 2.**Click “Standard Calibration” to start calibration procedure

**NOTE:** The older the touch screen, the more Advanced Mode calibration points you need for an accurate calibration. Use a stylus during Advanced Calibration for greater accuracy. Please follow the step as below:

**Step 3.** Select **Device** to calibrate, then you can start to do **Advanced Calibration**.

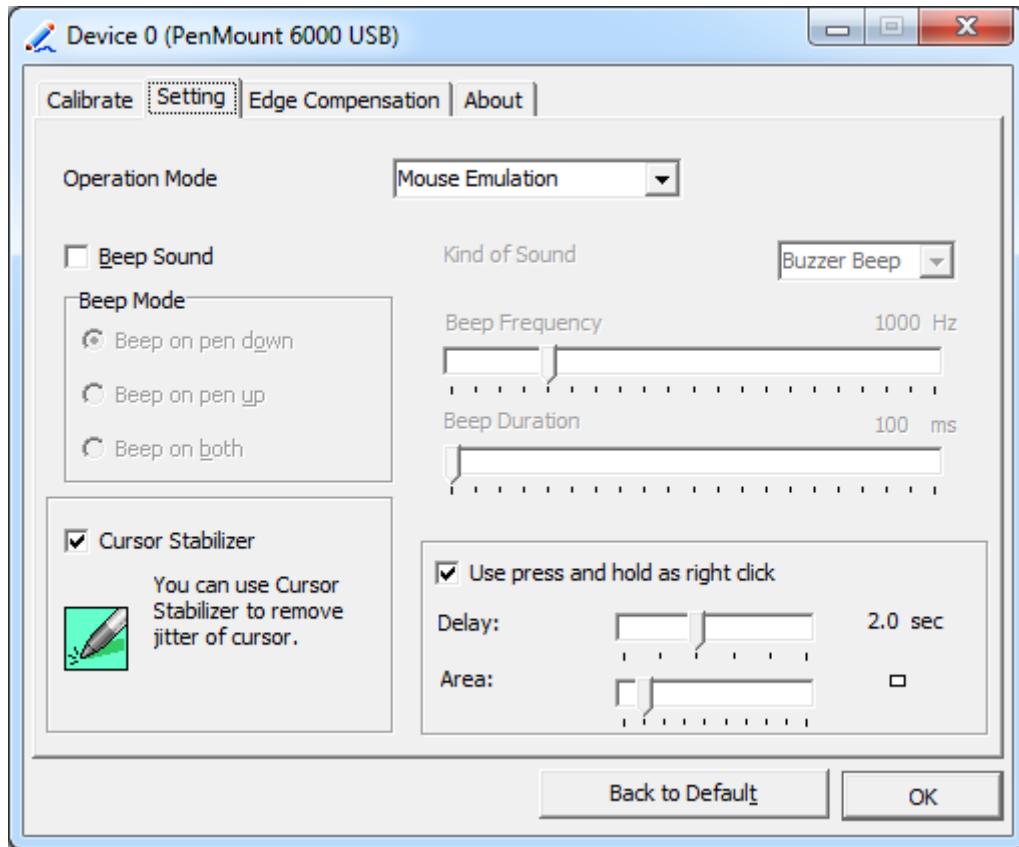

**NOTE:** Recommend to use a stylus during Advanced Calibration for greater accuracy.

Plot Calibration Data	<b>Check this function and a touch panel linearity comparison graph appears when you have finished Advanced Calibration. The blue lines show linearity before calibration and black lines show linearity after calibration.</b>
Turn off EEPROM storage	<b>The function disable for calibration data to write in Controller. The default setting is Enable.</b>

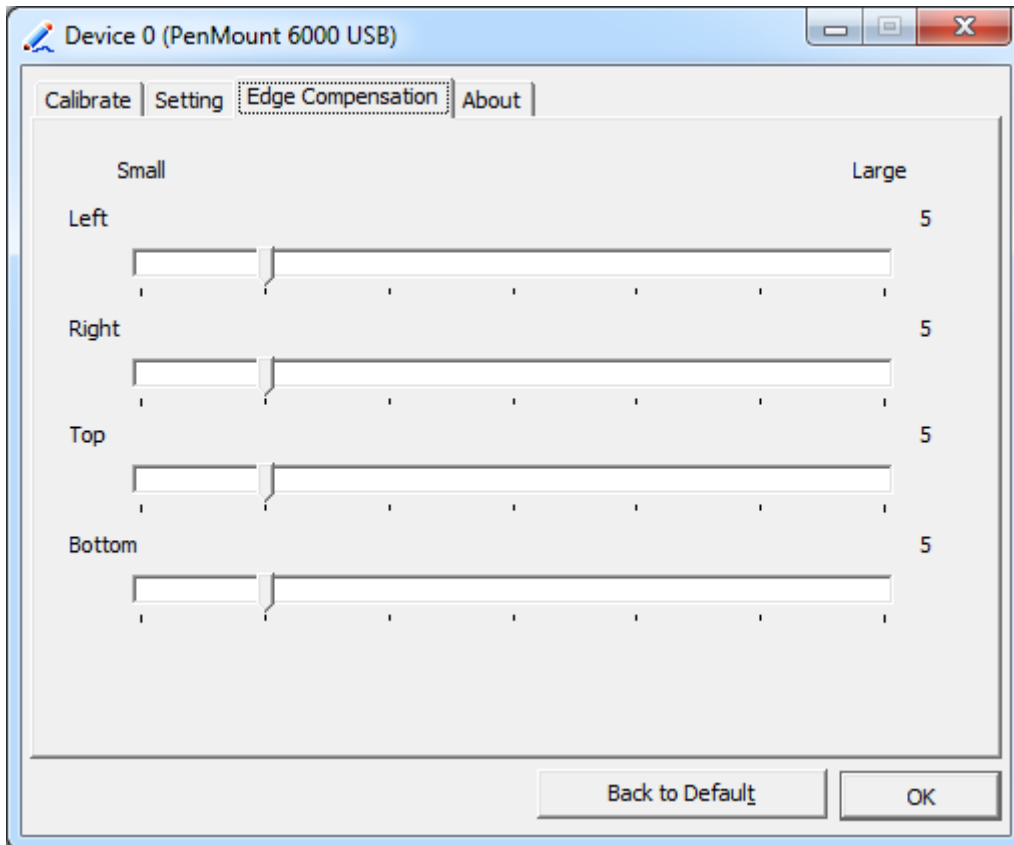

## Setting

Touch Mode	<p>This mode enables and disables the mouse’s ability to drag on-screen icons – useful for configuring POS terminals.</p> <p><b>Mouse Emulation</b> – Select this mode and the mouse functions as normal and allows dragging of icons.</p> <p><b>Click on Touch</b> – Select this mode and mouse only provides a click function, and dragging is disabled.</p>
Beep Sound	<p><b>Enable Beep Sound</b> – turns beep function on and off</p> <p><b>Beep on Pen Down</b> – beep occurs when pen comes down</p> <p><b>Beep on Pen Up</b> – beep occurs when pen is lifted up</p> <p><b>Beep on both</b> – beep occurs when comes down and lifted up</p> <p><b>Beep Frequency</b> – modifies sound frequency</p> <p><b>Beep Duration</b> – modifies sound duration</p>
Cursor Stabilizer	<p><b>Enable the function support to prevent cursor shake.</b></p>
Use press and hold as right click	<p><b>You can set the time out and area for you need.</b></p>

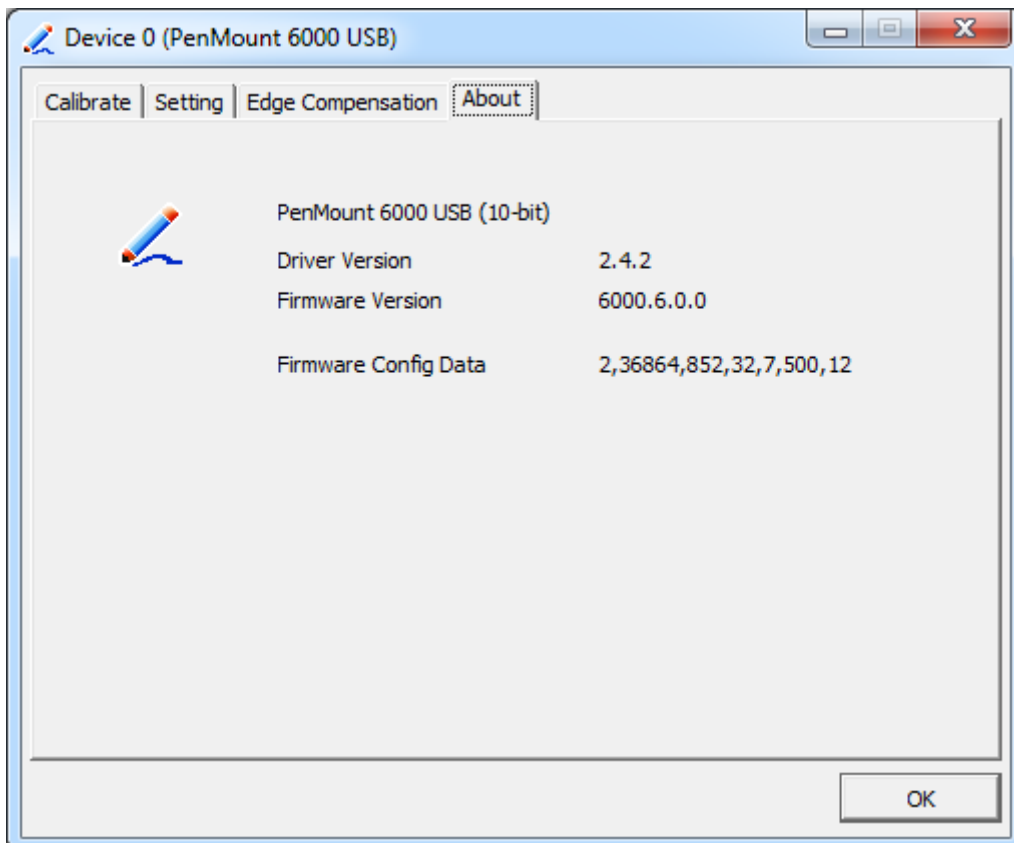

## Edge Compensation

You can use Edge Compensation to calibrate more subtly.

## About

This panel displays information about the PenMount controller and driver version.

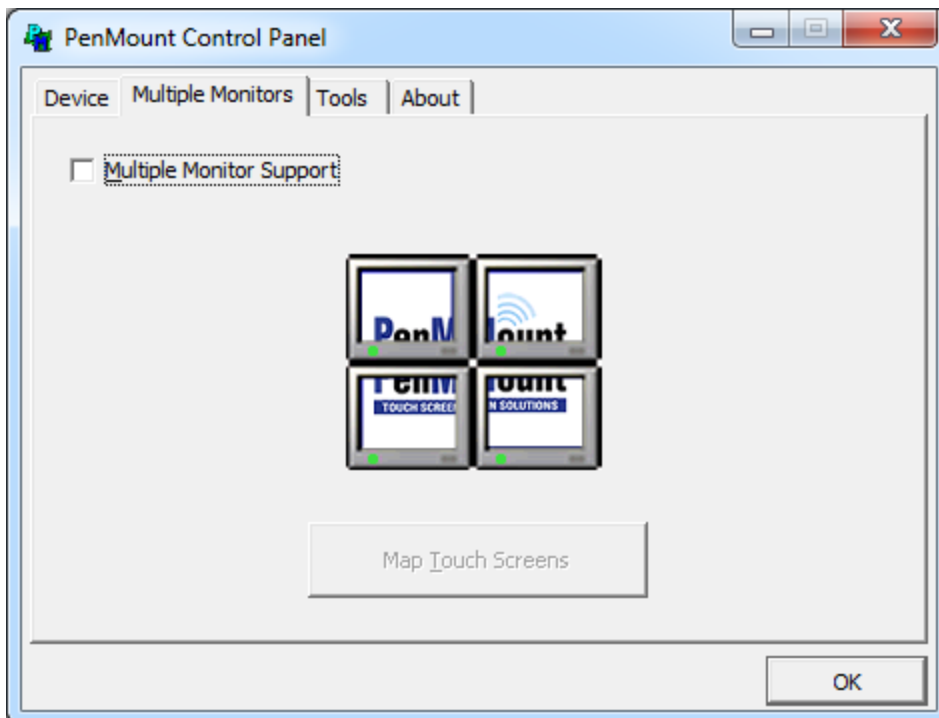

## Multiple Monitors

Multiple Monitors support from two to six touch screen displays for one system. The PenMount drivers for Windows 7/8/8.1 support Multiple Monitors. This function supports from two to six touch screen displays for one system. Each monitor requires its own PenMount touch screen control board, either installed inside the display or in a central unit. The PenMount control boards must be connected to the computer COM ports via the USB interface. Driver installation procedures are the same as for a single monitor. Multiple Monitors support the following modes:  
Windows Extends Monitor Function  
Matrox DualHead Multi-Screen Function  
nVidia nView Function

**NOTE:** The Multiple Monitor function is for use with multiple displays only. Do not use this function if you have only one touch screen display. Please note once you turn on this function the rotating function is disabled.

Enable the multiple display function as follows:

1. Check the **Enable Multiple Monitor Support** box; then click **Map Touch Screens** to assign touch controllers to displays.

2. When the mapping screen message appears, click **OK**.
3. Touch each screen as it displays “Please touch this monitor”. Following this sequence and touching each screen is called **mapping the touch screens**.

4. Touching all screens completes the mapping and the desktop reappears on the monitors.
5. Select a display and execute the “Calibration” function. A message to start calibration appears. Click **OK**.

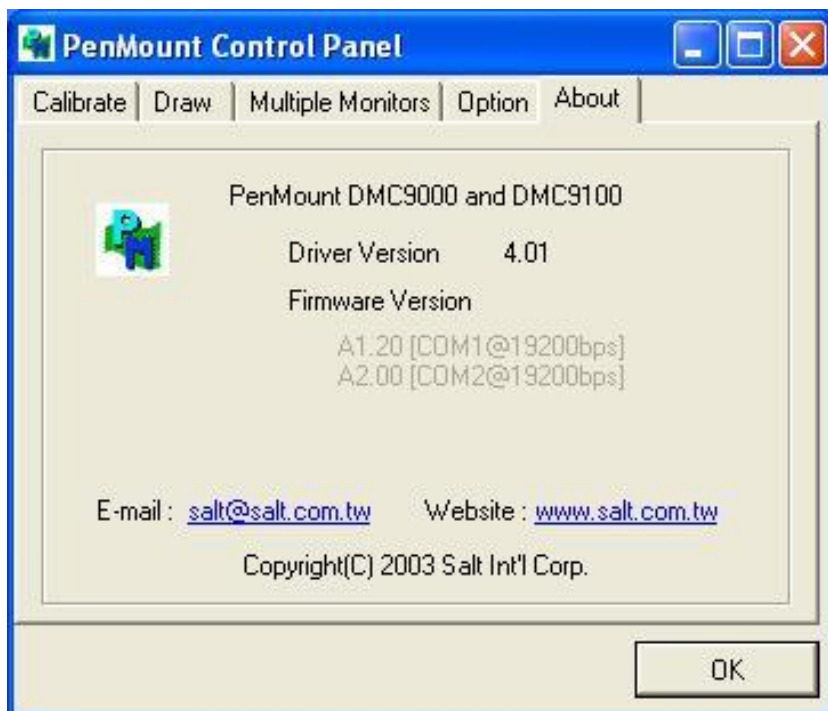

6. “Touch this screen to start its calibration” appears on one of the screens. Touch the screen.
7. “Touch the red square” messages appear. Touch the red squares in sequence.
8. Continue calibration for each monitor by clicking **Standard Calibration** and touching the red squares.

**NOTES:**

1. If you use a single VGA output for multiple monitors, please do not use the **Multiple Monitor** function. Just follow the regular procedure for calibration on each of your desktop monitors.
2. The Rotating function is disabled if you use the Multiple Monitor function.
3. If you change the resolution of display or screen address, you have to redo **Map Touch Screens**, so the system understands where the displays are.

## About

This panel displays information about the PenMount controller and this driver version.

### PenMount Monitor Menu Icon

The PenMount monitor icon (PM) appears in the menu bar of Windows 7/8/8.1 system when you turn on PenMount Monitor in PenMount Utilities.

PenMount Monitor has the following function

Control Panel	<b>Open Control Panel Windows</b>
Beep	<b>Setting Beep function for each device</b>
Right Button	<p><b>When you select this function, a mouse icon appears in the right-bottom of the screen.</b></p> <p><b>Click this icon to switch between Right and Left Button functions.</b></p>
